

Supplementary Figure 3. BGC network showing chemical diversity for rhizosphere and plant associated-*Streptomyces*. Colors in nodes represent the classification by chemical families according to BiG-SCAPE. From outer to inner rings: Singletons and BGCs grouped in GCFs, only formed by *Streptomyces* strains, BGCs included in a GCF together with known BGCs from MiBIG, and GCFs including BGCs from *S. sp. FT1* (pink border) and *S. sp. FB2* (yellow border).
