SUPPLEMENTARY FIGURE LEGENDS

Supplementary Figure 1. ERG amplitude—DA 0.01 and DA 10.0 conditions. Mean ($\pm$ SD) a-wave (A, B) and b-wave (C, D) amplitude values (μ V) for all groups at baseline and Days 15, 29, 92, and 182 under dim (DA 0.01) and bright (DA 10.0) flash conditions, respectively.

Supplementary Figure 2. ERG implicit time for the a-wave. Mean ($\pm$ SD) a-wave implicit time (ms) across all groups at baseline and Days 15, 29, 92, and 182 for (A) DA 0.01, (B) DA 3.0, (C) DA 10.0, and (D) LA 3.0 stimulus conditions. Implicit times remained largely stable across all groups and timepoints.

Supplementary Figure 3. ERG implicit time for the b-wave. Mean ($\pm$ SD) b-wave implicit time (ms) across all groups at baseline and Days 15, 29, 92, and 182 for (A) DA 0.01, (B) DA 3.0, (C) DA 10.0, and (D) LA 3.0 stimulus conditions.
