Supplementary data

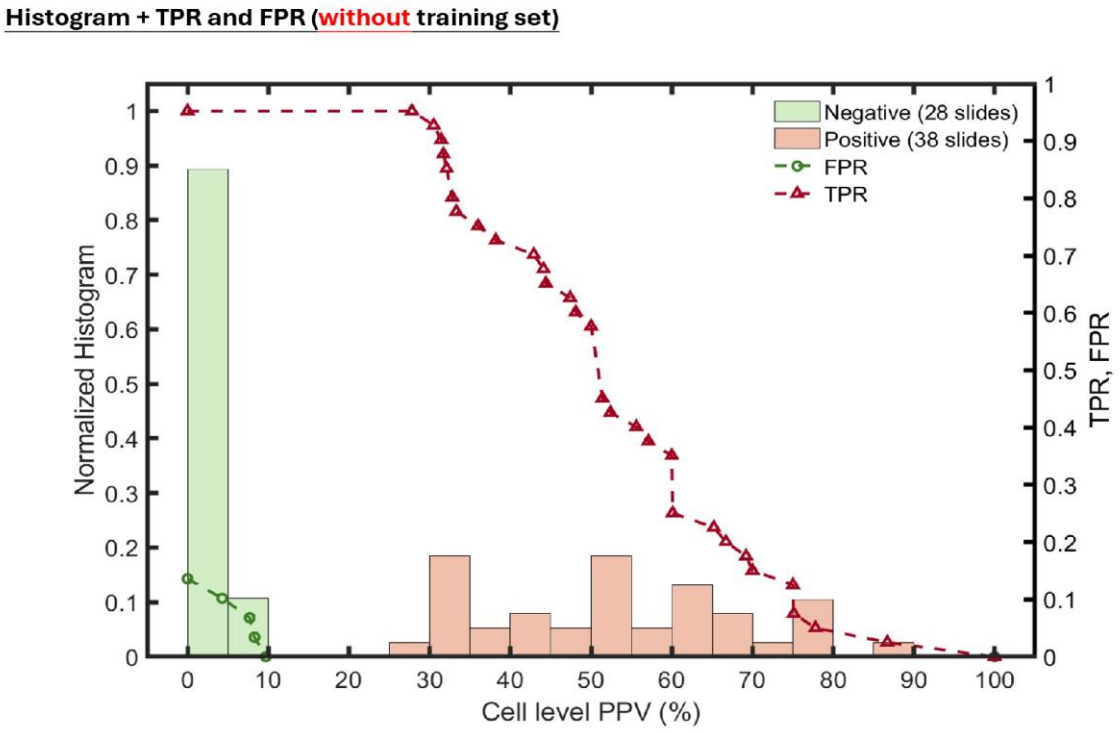

Fig. S1. Threshold-dependent exploratory slide-level classification performance after exclusion of the training set. TPR and FPR are plotted against the candidate-level PPV threshold using the 38 independent positive test slides and 28 negative-control slides. The inset shows the corresponding ROC curve.

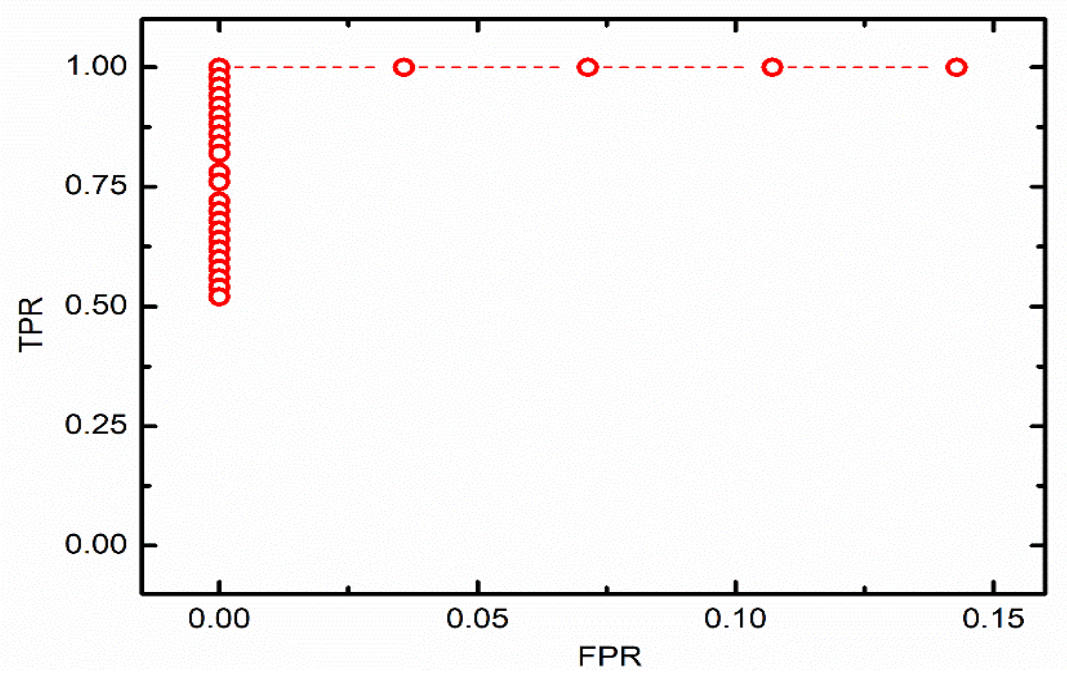

Fig. S2. ROC curve corresponding to the threshold-dependent classification analysis in Fig. 1. Each point represents the slide-level TPR and FPR obtained at a different candidate-level PPV threshold; the analysis includes the training slides, independent positive test slides, and negative-control slides.

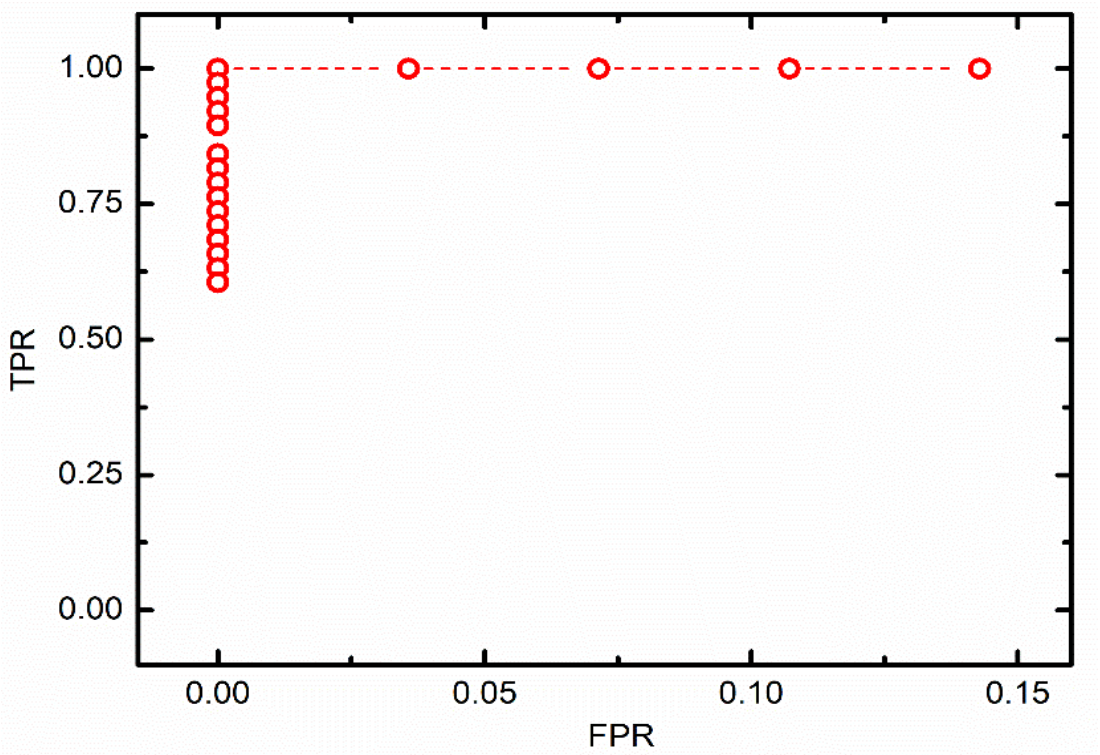

Fig. S3. ROC curve corresponding to the threshold-dependent analysis in Fig. S1. The curve includes the 38 independent positive test slides and 28 negative-control slides, with the training set excluded.
