
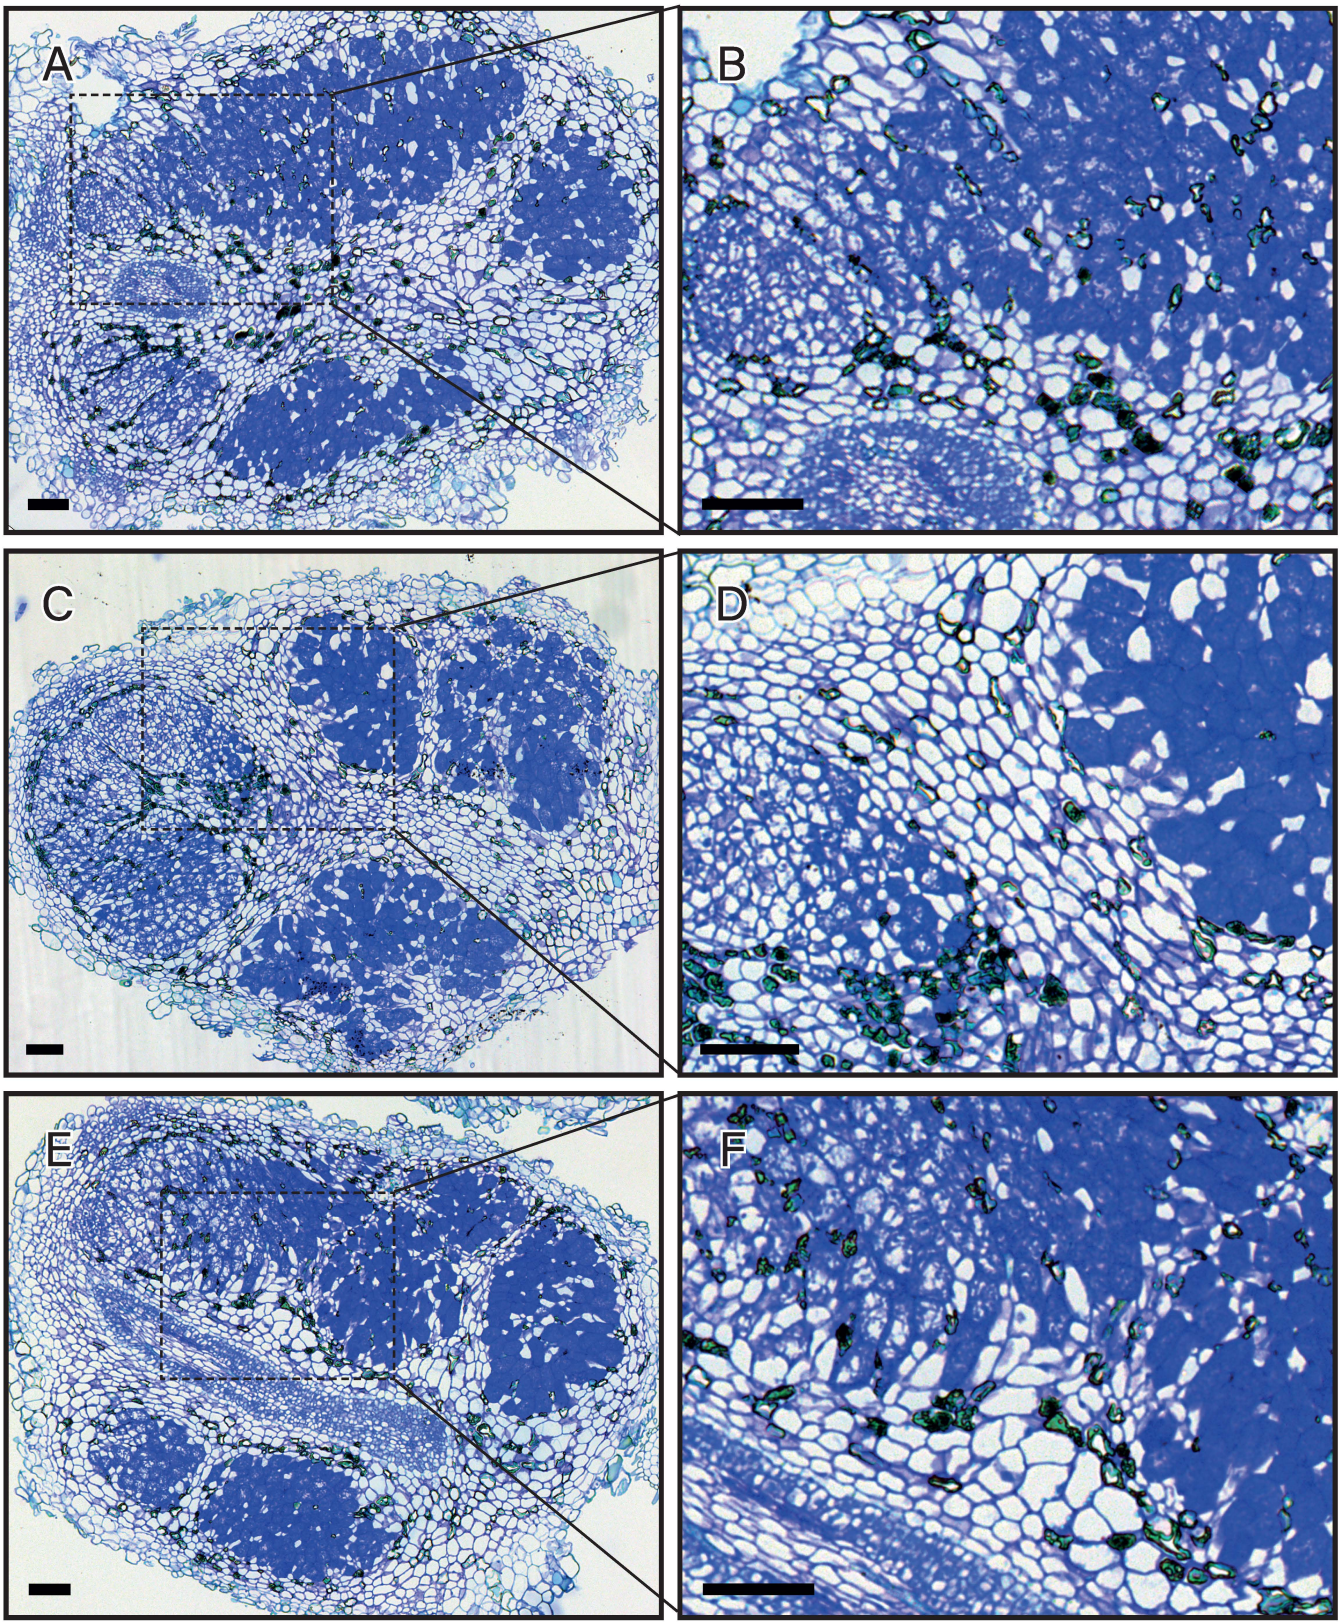

Figure S3: *Trans TorEPR* in *P. andersonii* doesn't affect nodulation. Light microscopy images of *P. andersonii* transgenic lines harboring *pTorEPR:TorEPR* thin nodule sections induced with *Bradyrhizobium elkanii* WUR3. (**A, B**) Empty vector control line expressing only the kanamycin selection marker. (**C, D**) transgenic line 1.3 containing *pTorEPR:TorEPR* (**E, F**) transgenic line 2.1. containing *pTorEPR:TorEPR* (**B, D, F**) Zoom imaging of the infection zone. Scale bars are 100 µm.
