
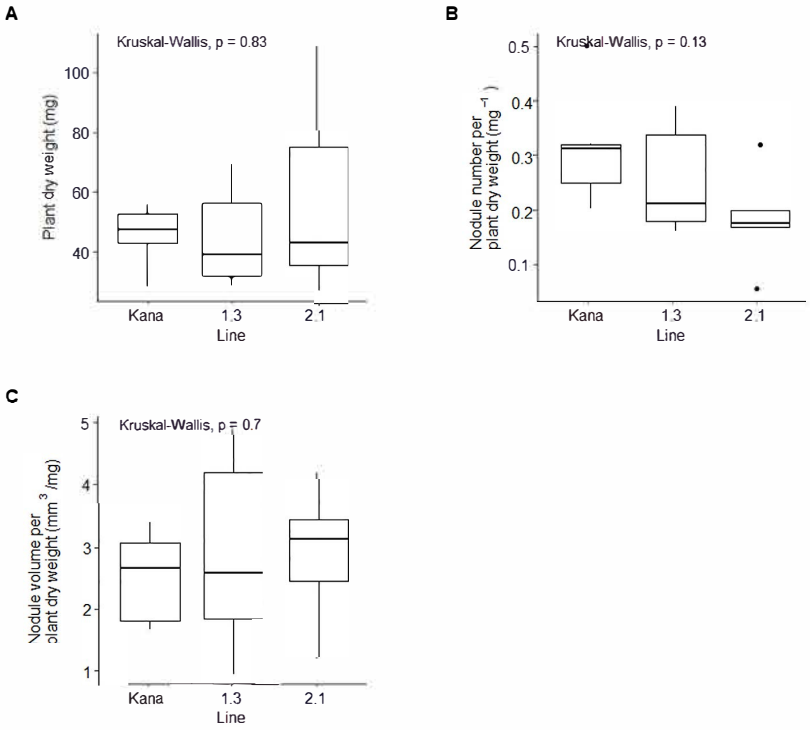

Figure S4. *P. andersonii* lines expressing *TorEPR* do not reveal a phenotype. (**A**) Plant dry weight boxplot (n=6). (**B**) Nodule number on *P. andersonii* root boxplot (n = 6). Nodule number is normalized by plant dry weight. (**C**) Total nodule volume per plant boxplot (n = 6). Nodule volume is normalized by plant dry weight. Two independent lines (1.3 and 2.1) expressing *TorEPR* have been analysed 34 dpi with *Bradyrhizobum elkanii* WUR3.
