Latent HIV Infection of BBB Pericytes Disrupts Gap Junction-Mediated Crosstalk with Endothelial Cells

Sarah Schmidlin ¹, Oandy Naranjo ¹, Silvia Torices ¹, Nikolai Fattakhov ¹, Monika Gilicinska ¹, Masha Minevich ¹, Kyra Schindler ², Destiny Tiburcio ³, Olivia M. Osborne ¹, Arpan Acharya ⁴, Minseon Park ¹, Mario Stevenson ⁵, Siddappa N. Byraredy ⁴, and Michal Toborek ¹

Supplementary Fig. 1 Gating strategy for flow cytometry experiments. CD31 and CD13 gating to differentiate between pericytes (CD13 positive) and endothelial cells (double positive) for (A) 3-days and (B) 7-days. One representative graph is shown for each experimental condition.
