

Supplementary Figure 3.- Effect of salinity on lipid peroxidation in *Salicornia lagascae* shoots after 6 weeks of treatment. Data represent the mean $\pm$ SE from five different biological samples plants. The absence of letters in the columns indicate no significant differences according to Tukey's multiple range test ($p \leq 0.05$). S30 and S60: Plants obtained from micropropagation on solid medium and irrigated with 30 g/L and 60 g/L NaCl, respectively; L30 and L60: Plants obtained from micropropagation in liquid medium and irrigated with 30 g/L and 60 g/L NaCl, respectively.
