

Supplement Figure 5

5A Subgroup analysis based on statistical approaches (DFS/RFS)

5C Subgroup analysis based on statistical approaches (EFS)

5B Subgroup analysis based on statistical approaches (OS)

5D Subgroup analysis based on statistical approaches (PFS)

Supplement Figure 5 - Forest plots of studies demonstrating the association between circulating tumor DNA positivity and survival outcomes in solid cancer patients who received neoadjuvant treatment across different statistical approaches. (A) Disease-free survival/recurrence-free survival in univariate and multivariate subgroups. (B) Overall survival in univariate and multivariate subgroups. (C)Event-free survival in univariate and multivariate subgroups. (D)Progression-free survival in univariate and multivariate subgroups. DFS/RFS, disease-free survival/recurrence-free survival; OS, overall survival; EFS, event-free survival; PFS, progression-free survival; HR, Hazard ratio; uni, univariate analysis; multi, multivariate analysis.
