Table S1. Characteristics of different variants of recombinant wild-type cTRPs

[illegible]

His6X tag (green), thrombin cleavage-site (cyan), and cysteine residues responsible for disulfide-linked ring closure (yellow) are highlighted with different colors. Molecular weights and extinction coefficients at 280 nm are indicated as follows: ^a for the fully assembled ring, and ^b for a single subunit (monomer).

Table S2. Characteristics of different variants of recombinant clickable cTRPs

[illegible]

Table S3. Amino acid sequences of genetically encoded clickable membrane-displayed cTRPs

[illegible]
