

Uncropped western blot images corresponding to Fig. 6H. The membrane shows the expression levels of IL-1 β protein in Adrenic Acid $^-$ and Adrenic Acid $^+$ groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

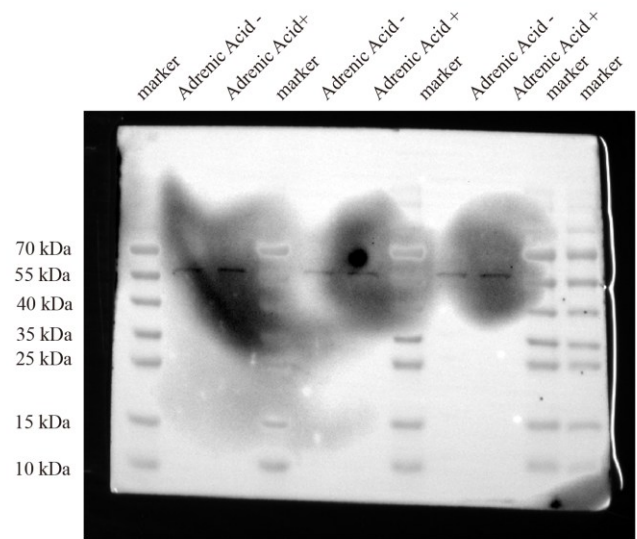

Uncropped western blot images corresponding to Fig. 6H. The membrane shows the expression levels of NLRP3 protein in Adrenic Acid $^-$ and Adrenic Acid $^+$ groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

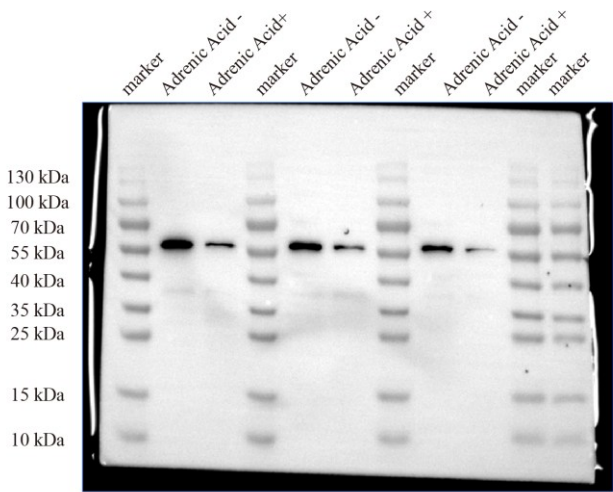

Uncropped western blot images corresponding to Fig. 6H. The membrane shows the expression levels of HLA DR protein in Adrenic Acid⁻ and Adrenic Acid⁺ groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

HLA DR

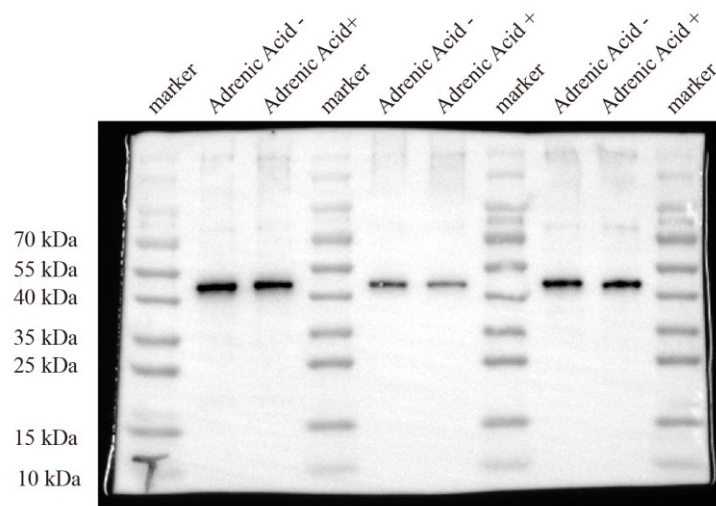

Uncropped western blot images corresponding to Fig. 6H. The membrane shows the expression levels of NAMPT protein in Adrenic Acid⁻ and Adrenic Acid⁺ groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

NAMPT

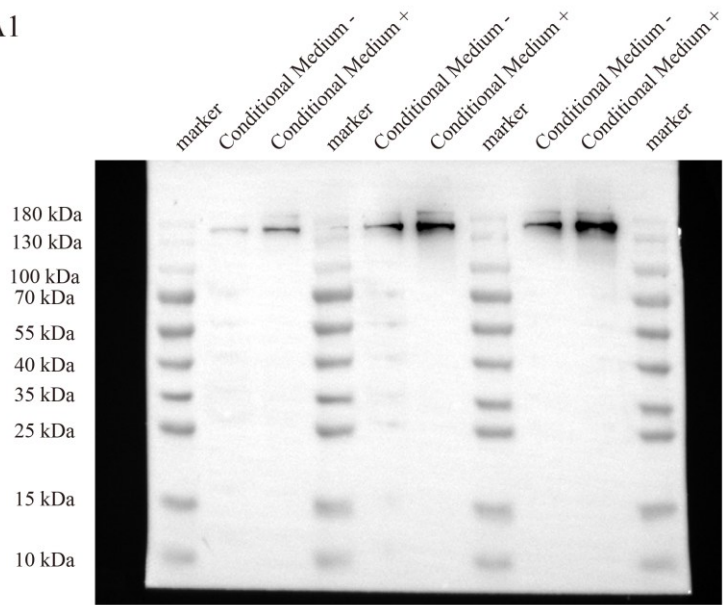

Uncropped western blot images corresponding to Fig. 6H. The membrane shows the expression levels of β -actin protein in Adrenic Acid⁻ and Adrenic Acid⁺ groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

β -actin

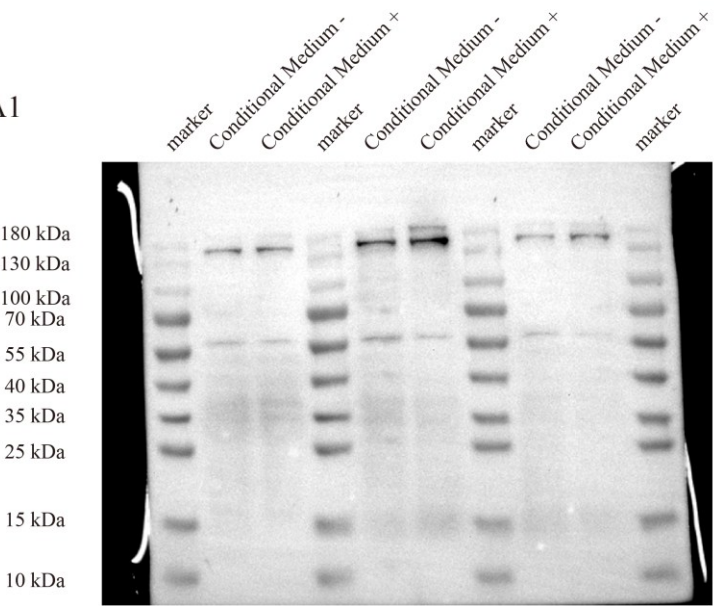

Uncropped western blot images corresponding to Fig. 7D. The membrane shows the expression levels of COL1A1 protein in Conditional Medium – and Conditional Medium + groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

COL1A1

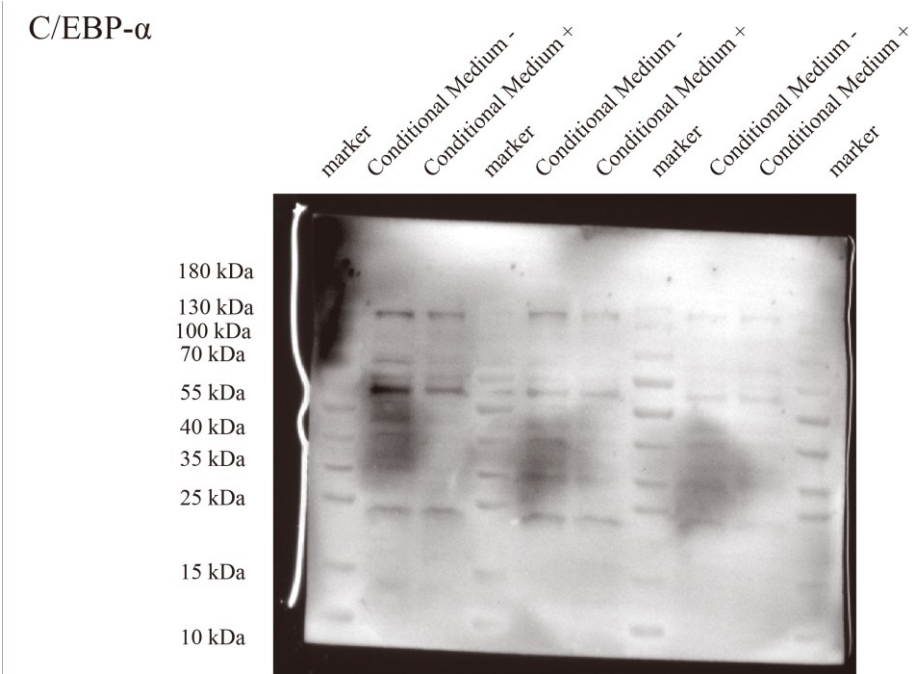

Uncropped western blot images corresponding to Fig. 7D. The membrane shows the expression levels of COL3A1 protein in Conditional Medium – and Conditional Medium + groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

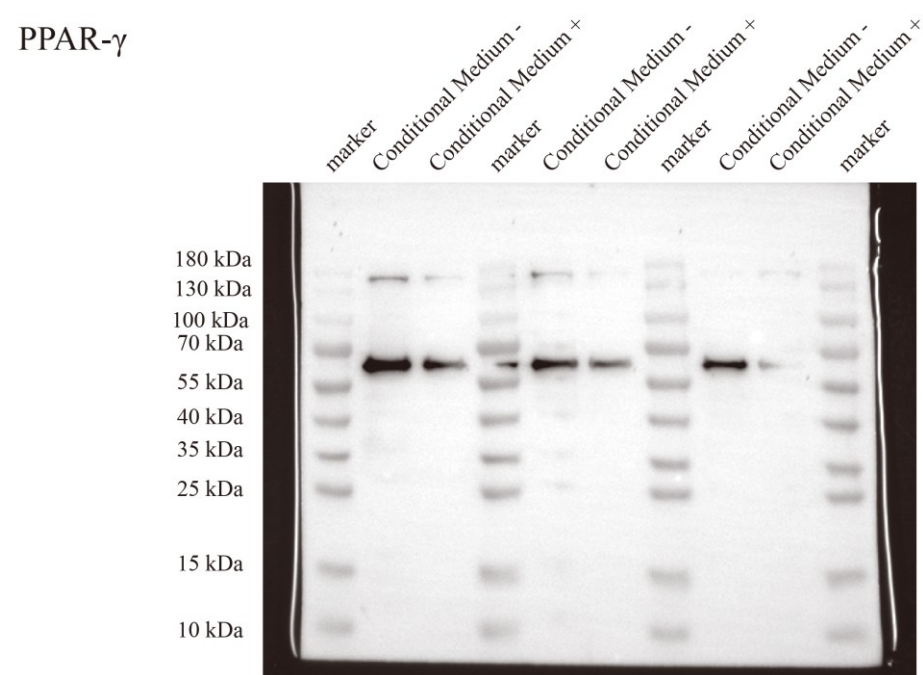

COL3A1

Uncropped western blot images corresponding to Fig. 7D. The membrane shows the expression levels of C/EBP- α protein in Conditional Medium – and Conditional Medium + groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

Uncropped western blot images corresponding to Fig. 7D. The membrane shows the expression levels of PPAR- γ protein in Conditional Medium – and Conditional Medium + groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.

Uncropped western blot images corresponding to Fig. 7D. The membrane shows the expression levels of PPAR- γ protein in Conditional Medium – and Conditional Medium + groups. Full-length, uncropped blot images are provided to demonstrate the original data used for the quantification shown in the corresponding figure.
