

Country	Analysis approach	Key indicators
Burkina Faso	Descriptive with values reported by location	Vaccination status for 24–59 months, reasons of missing doses during the last 5 years. Reasons for non-vaccination: proportion of children who were caught up after the vaccinators had visited the vaccination sites; main communication channels used; number of adverse events following immunization reported
Cameroon	Descriptive with frequencies/percentages; tabulations	Vaccination status categories (fully/under-vaccinated/zero-dose) by age (12–23, 24–35 and 36–71 months); card/source of verification; campaign awareness/invitation; reasons for non-vaccination; health facility readiness and implementation
Democratic Republic of Congo	Descriptive with frequencies/percentages; BeSD-domain summaries	Vaccination status by age group (12–23 and 24–59 months); geography (province/zone/health area); vaccination status categories; reasons for missed vaccination structured by BeSD domains
Gambia	Descriptive with frequencies/percentages by dose	Vaccination status by age group (12–23 and 24–59 months) and by sex; dose-specific completion status; regional level and district level coverage analysis; composite indicators (e.g., fully immunized child definitions); source of information, reasons for missed children
Guinea	Descriptive with frequencies/percentages	Vaccination status by age stratification (0–11 and 12–23 months)
Mali	Descriptive with frequencies/percentages	Vaccination status. Reasons for missing doses
South Sudan	Descriptive with frequencies/percentages; tabulations	Vaccination status by age group (0–11 and 12–59 months); card availability; awareness and information sources; barriers to vaccination
Tajikistan	Descriptive analysis with frequencies/percentages; age- and sex-disaggregated tabulations; BeSD-domain analysis; linked household and BCU institutionalization assessment summaries	Vaccination status by age group (<1 and 1–6 years) by sex; health systems summaries. Vaccination status by age group (<1 year and 1–6 years) and sex; HBR/card availability; antigen-specific uptake for Penta, IPV and measles-containing vaccine/MMR where age-eligible; zero-dose and under-immunized status; Penta1–Penta3 dropout; missed opportunities/being turned away; BeSD indicators; and BCU institutionalization indicators covering SOPs, supply chain, microplanning, outreach, DHIS2/EIR use and community engagement

Abbreviations

BCU: Big Catch-Up

BeSD: behavioral and social drivers for immunization

EIR: electronic immunization registry

HBR: home-based record

IPV: inactivated poliovirus vaccine

MMR: measles, mumps, rubella vaccine

Penta: diphtheria-tetanus-pertussis-hepatitis B-*Haemophilus influenzae* type b-containing vaccine

SOPs: standard operating procedures
