

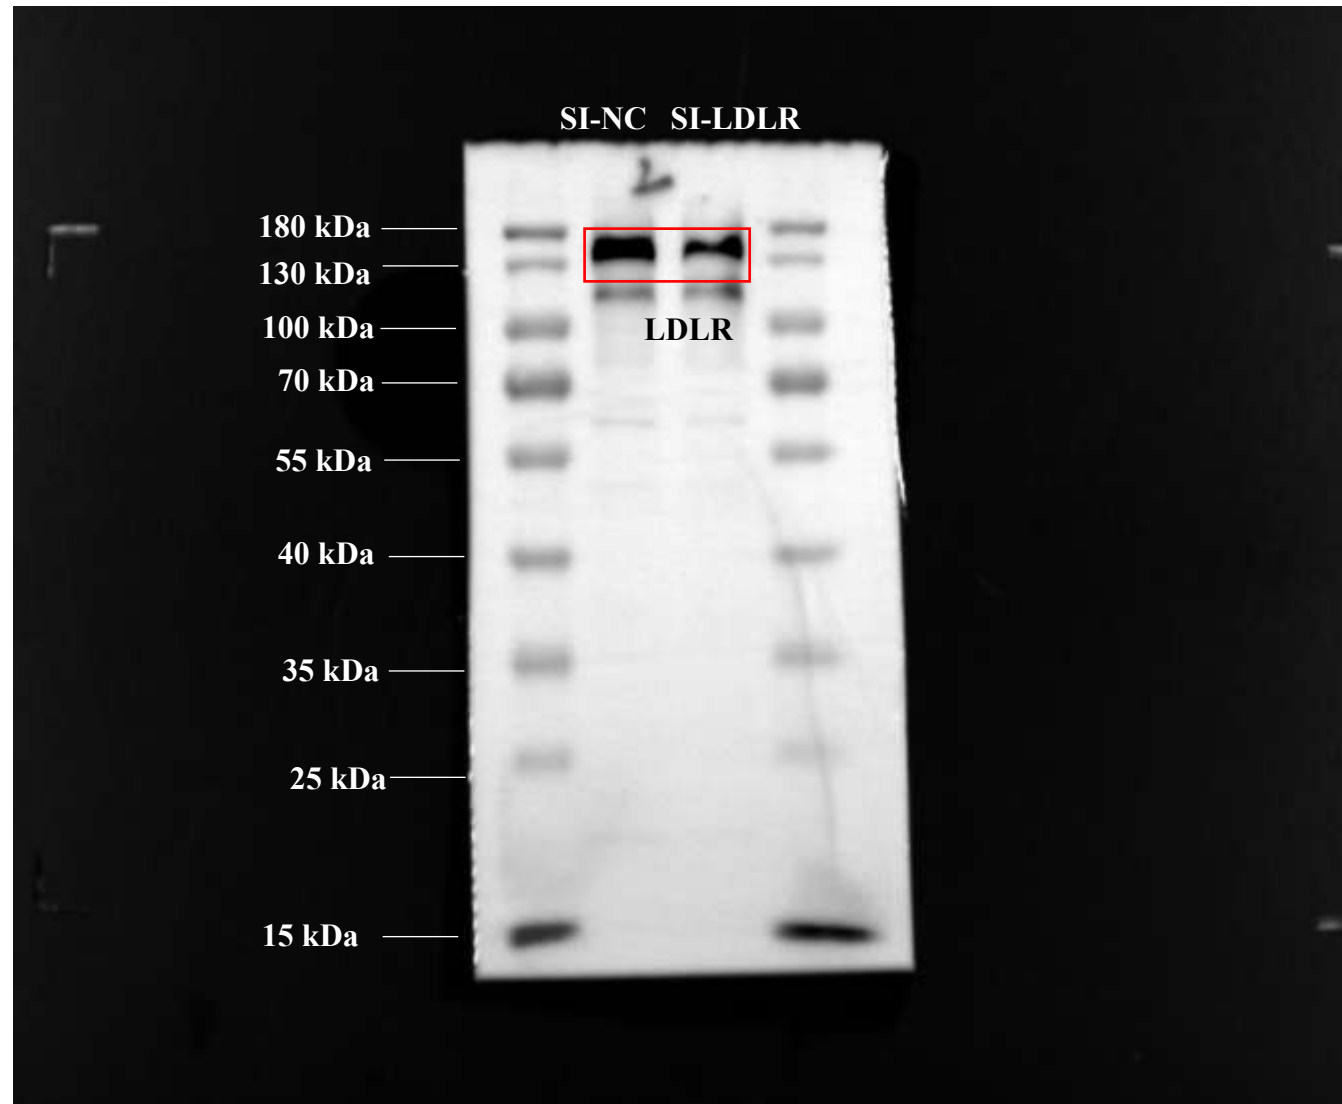

Fig.3E After knocking down LDLR with siRNA, PAMs were infected with PRRSV, and the levels of LDLR protein were detected.

The 15 kDa and 10 kDa protein markers on 10% protein gel will overlap with each other.

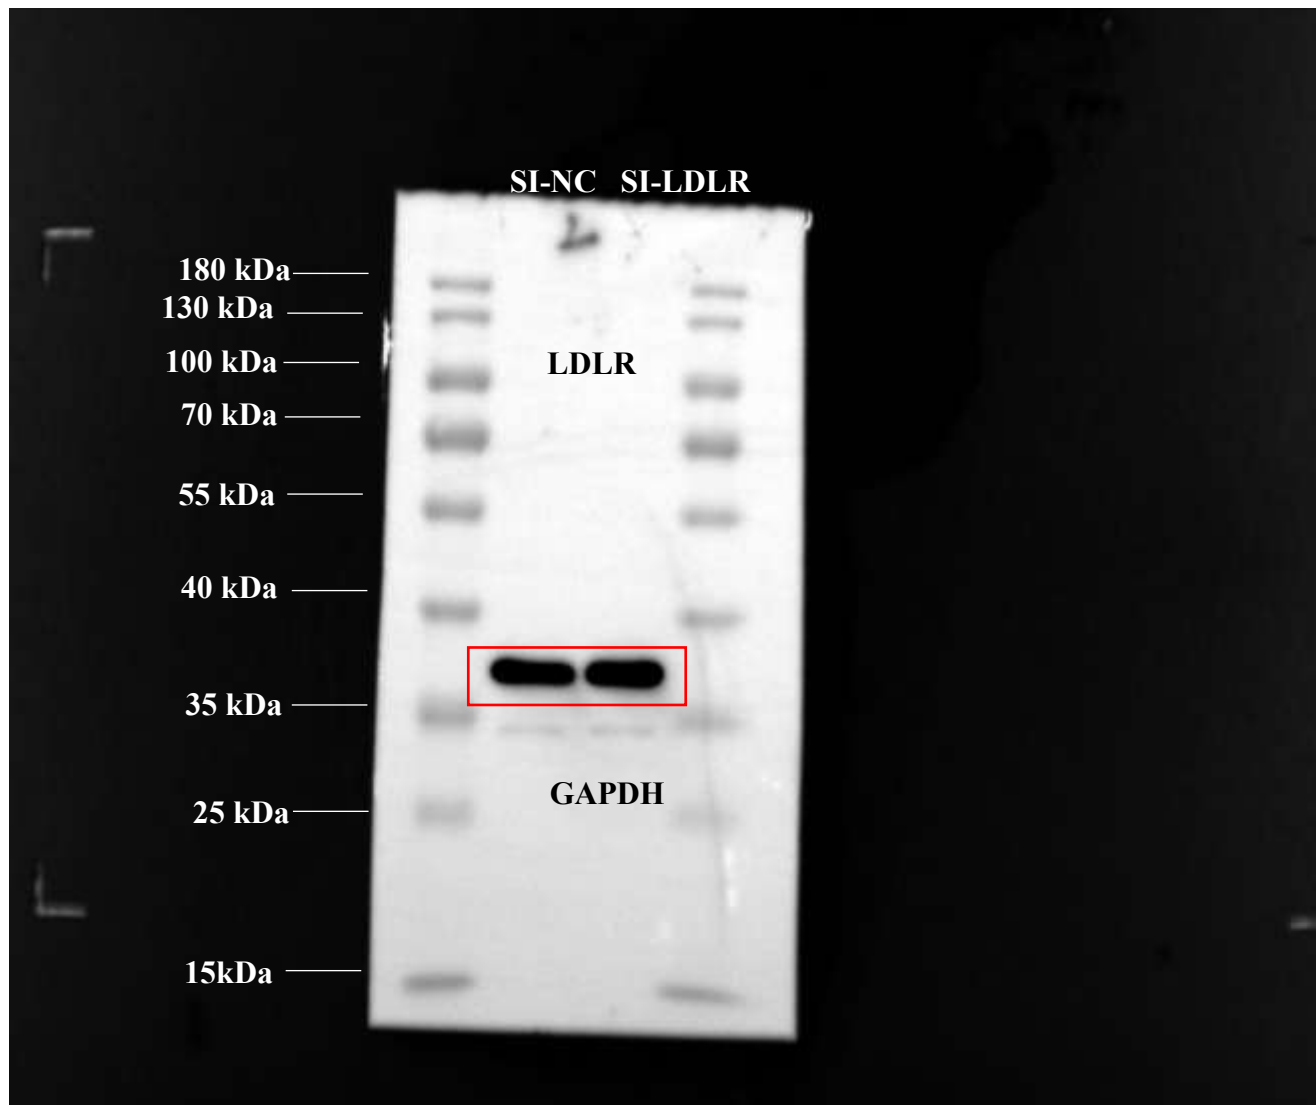

Fig.3E After knocking down LDLR with siRNA, PAMs were infected with PRRSV, and the levels of GAPDH protein were detected.

The 15 kDa and 10 kDa protein markers on 10% protein gel will overlap with each other.

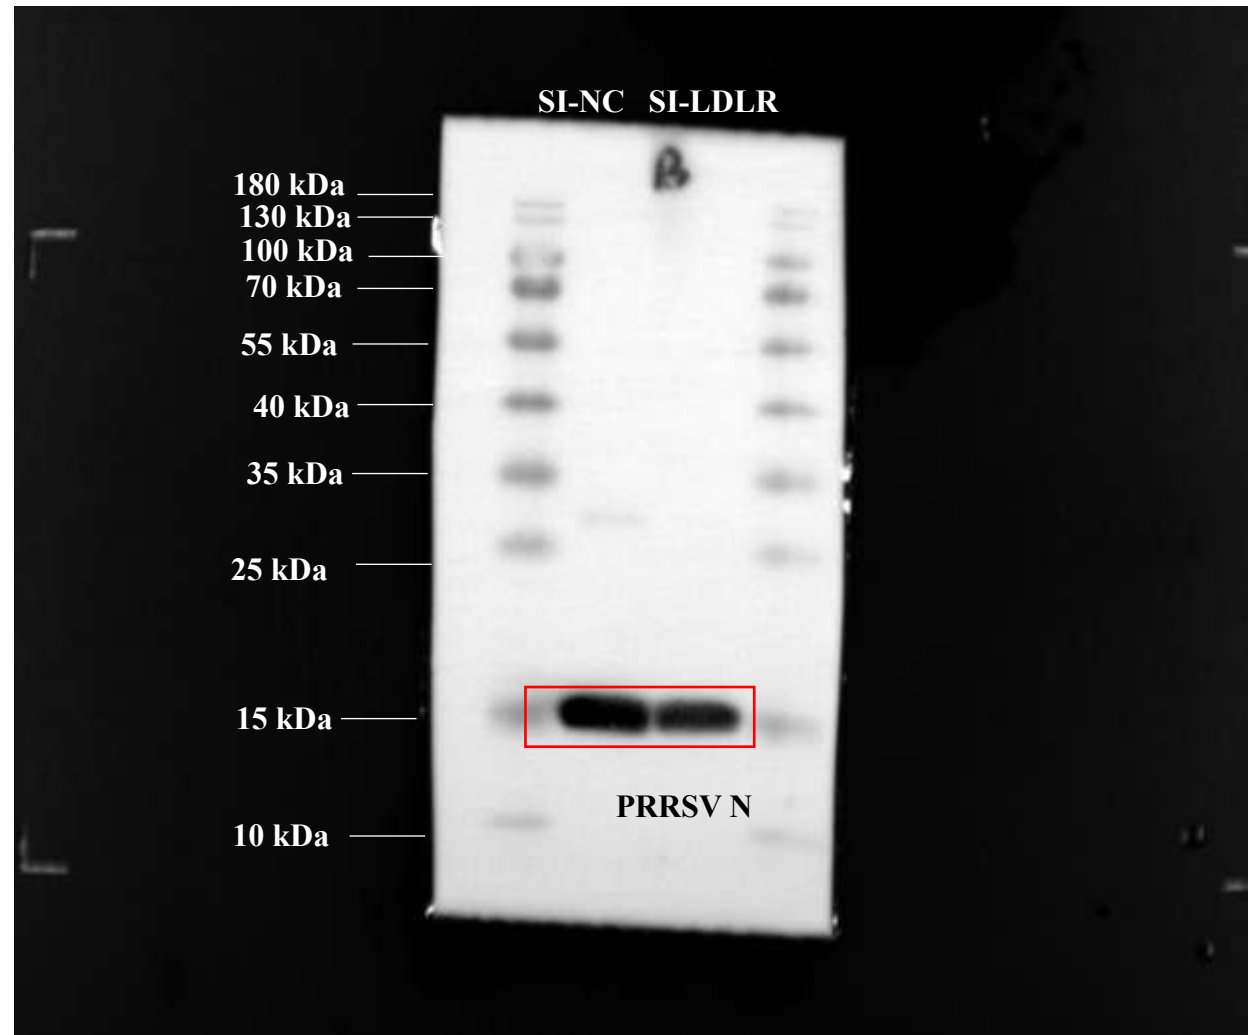

Fig.3E After knocking down LDLR with siRNA, PAMs were infected with PRRSV, and the levels of PRRSV N protein were detected.

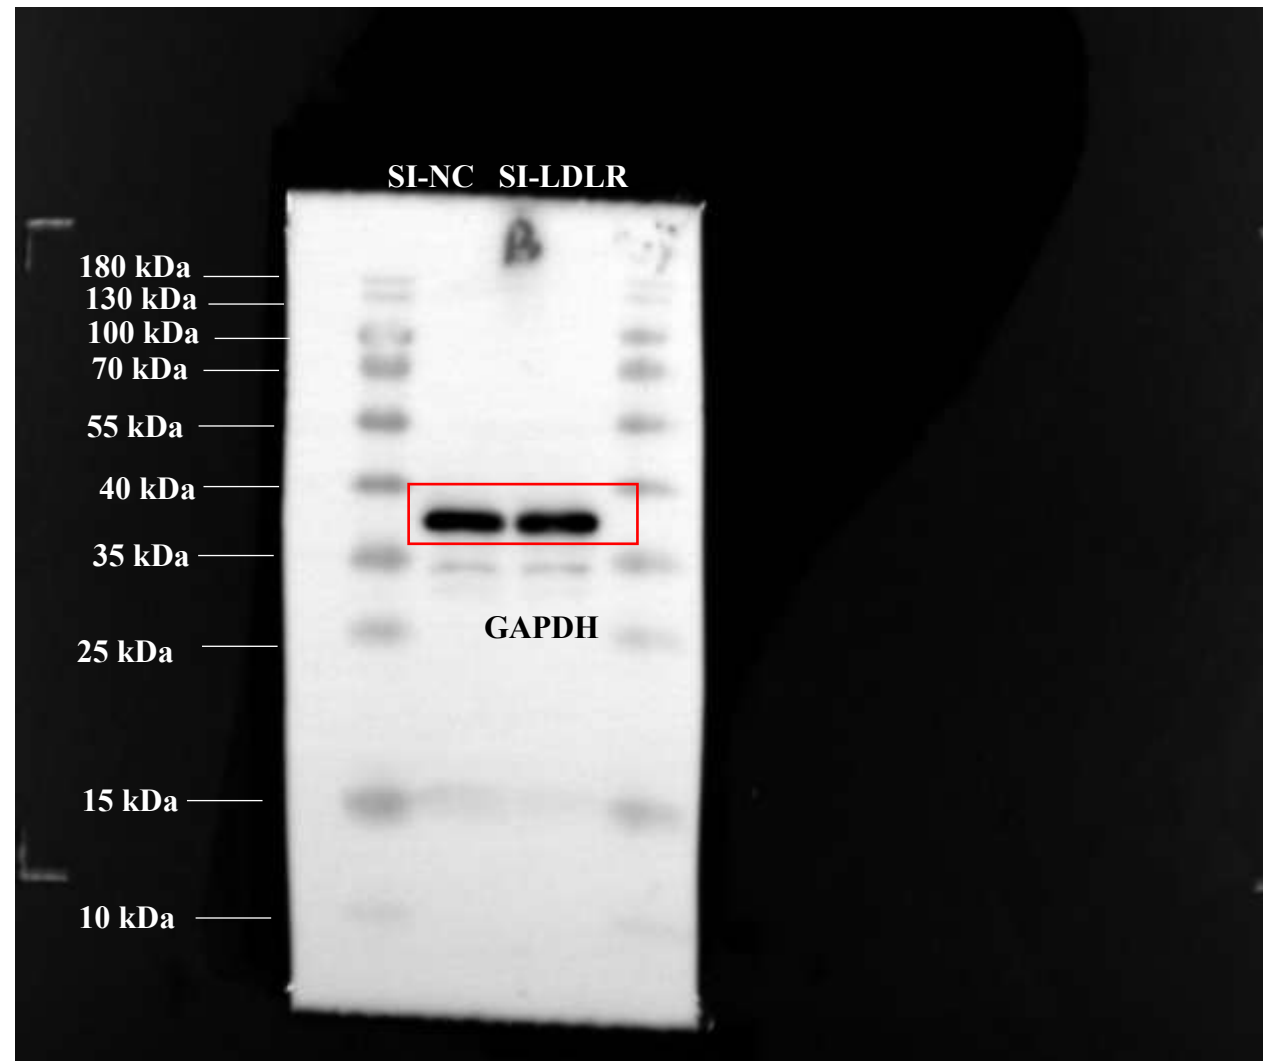

Fig.3E After knocking down LDLR with siRNA, PAMs were infected with PRRSV, and the levels of GAPDH protein were detected.
