

The apparent truncation is attributable to the physical position of the marker lane rather than image cropping.

Fig.5H PAMs were treated with GW3965 or not for 24 hours, and then infected with PRRSV or not, and NLRP3 protein expression was assessed.

The 15 kDa and 10 kDa protein markers on 10% protein gel will overlap with each other.

The apparent truncation is attributable to the physical position of the marker lane rather than image cropping.

Fig.5H PAMs were treated with GW3965 or not for 24 hours, and then infected with PRRSV or not, and GAPDH protein expression was assessed.

The 15kDa and 10 kDa protein markers on 10% protein gel will overlap with each other.
