

Table S3. Odds Ratios for Myopia and Severity Levels of Myopia in Adolescents by Type of Educational System

Educational System	Myopia		Mild Myopia		Moderate Myopia		High Myopia	
	OR (95% CI)	P-value	OR (95% CI)	P-value	OR (95% CI)	P-value	OR (95% CI)	P-value
Secular	1.00		1.00		1.00		1.00	
Religious	2.16 (2.14, 2.18)	<0.001	1.70 (1.68, 1.72)	<0.001	2.94 (2.89, 2.98)	<0.001	3.61 (3.52, 3.71)	<0.001

OR = Odds Ratio; 95% CI = 95% Confidence Interval

Myopia defined as Spherical Equivalent (SE) $\leq$ -0.5 Diopters (D), Mild myopia as $-0.5 \geq$ SE $>$ -3.0 D, moderate myopia as $-3.0 \geq$ SE $>$ -6.0 D, and high myopia defined as SE $\leq$ -6.0 D.

P-values were analyzed using multivariable logistic regression models adjusted for age and birth year as continuous variables, and gender, ethnic origin, socioeconomic status, and educational level as categorical variables.
