

Functional position on the Plant Economics Spectrum

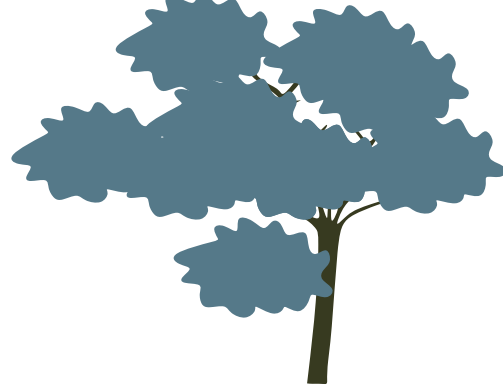

Ressource conservation

*Rhododendron ponticum*

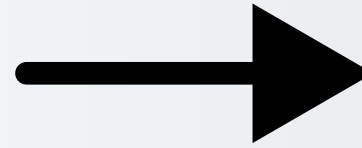

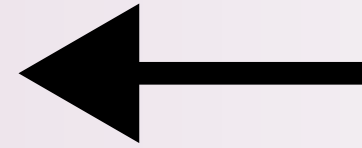

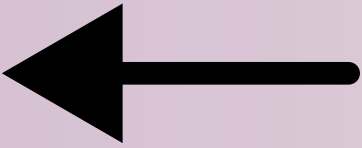

Ressource aquisition

*Prunus serotina*

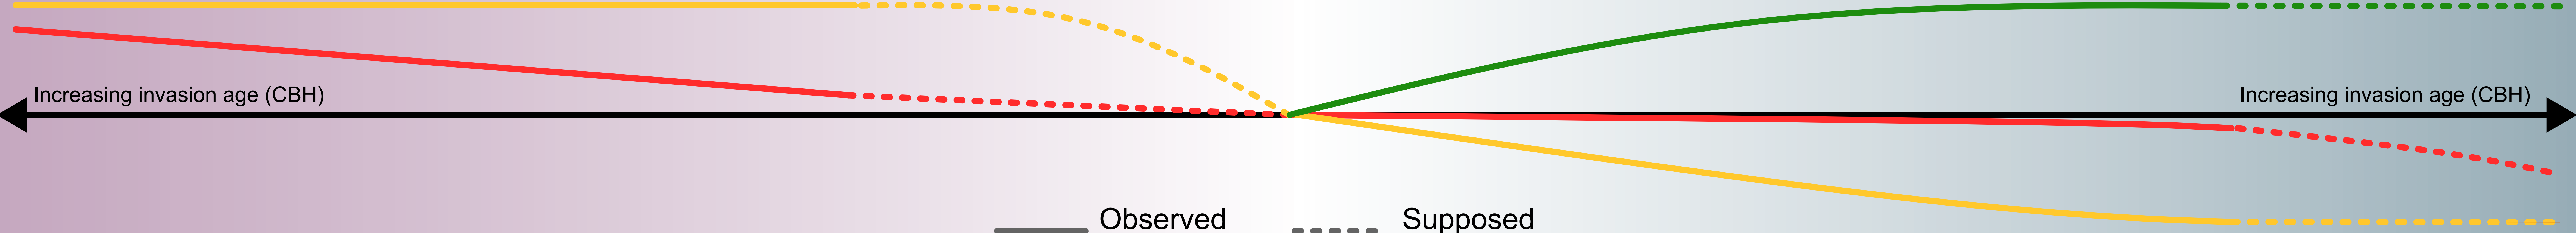

Forest structure

*Rapid understory establishment*

*Progressive canopy replacement*

Soil carbon transformation function

- Gradual increase in horizon O thickness
- Stabilization of the quantity of oxidizable and organic carbon (POXC and OL)

- Increase in the activity of organisms (AWCD)
- Reduction in litter thickness (OL)
