

HVF vs. VRF

n = 116 eyes

Supplementary Figure 1. Regional defect agreement between Humphrey visual field (HVF) and virtual reality visual field (VRF) perimetry.

Supplementary Figure 2. Linear mixed-effect model demonstrating the relationship between Humphrey visual field (HVF) test duration and point-by-point agreement between HVF and Humphrey-equivalent virtual reality visual field (VRF) testing, with (a) total deviation match rate and (b) pattern deviation match rate.

Supplementary Figure 3. Linear mixed-effect model demonstrating the relationship between point-by-point agreement between tabletop Humphrey visual field (HVF) and Humphrey-equivalent virtual reality visual field (VRF) testing, against visual acuity (logMAR).
