

Supplementary File 1

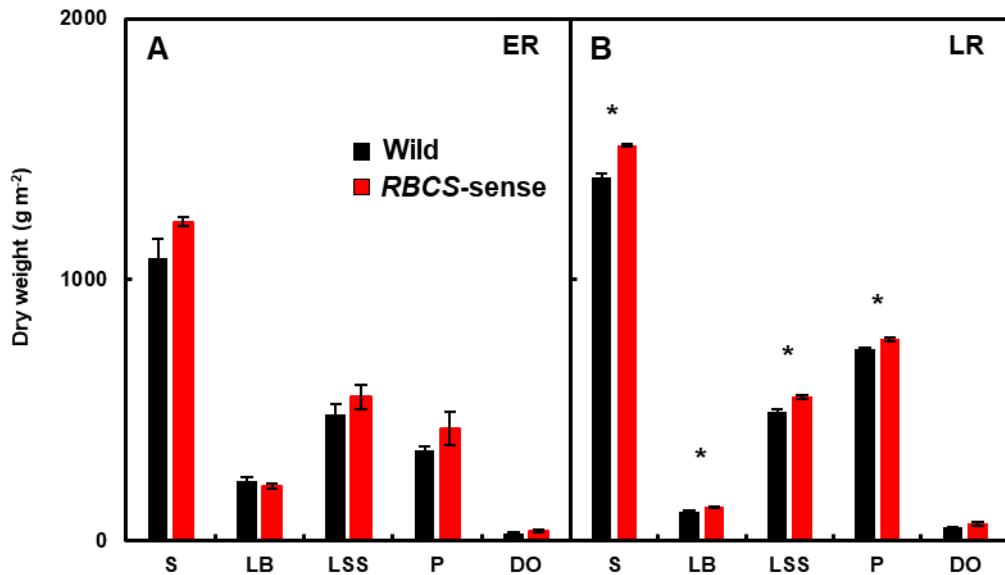

Fig. S1 Stem or panicle number of the wild-type and *RBCS-sense* the rice plants at 10 DAH in early and 49 DAH in late ripening stages in plots applied with 15 g N m^{-2} fertilizer. Mean values \pm the standard error of three independent plots, and those of stem numbers at an early ripening and panicle numbers at late ripening stages are shown. $*p < 0.05$ between the wild-type and *RBCS-sense* rice plants using Student's *t*-test. The abbreviations stand as follows: "ER"; early ripening stage, "LR"; late-ripening stage, "*RBCS-sense*"; transgenic rice plants overproducing Rubisco, "Wild"; wild-type rice plants.
