Schematic example | evidence-to-edit pathway

Narrative intent: two characters discover a hidden object, preserving left-to-right screen direction.

Rubric output

Continuity: 2/4 | confidence: .78
Evidence: Panel 3 camera-axis reversal

Proposed localized edit

Keep shot 3 camera on the original axis
Retain intended reveal and shot order

Computational constraint check

Verify screen-direction constraint
Issue edit only when evidence is sufficient

Illustrative workflow only; no student work or human rating is represented.
