Uncropped western blot images corresponding to Figure 7A.

Uncropped western blot images corresponding to Figure 7A. Uncropped western blot images of (A) CHRNA6, (B) LY6E, (C) LY6H, and (D) GAPDH in paired tumor and adjacent non-tumorous tissues from five patients with TNBC. GAPDH served as the loading control. A three-color prestained protein ladder (10–180 kDa; Epizyme, China; Cat. No. WJ106) was used as the molecular weight standard. Red arrows indicate the target bands in panels A-D. N, adjacent non-tumorous tissue; T, tumor tissue.
