Supplementary Information

Original Western blot images

Supplementary Figure S1. Original Western blot images corresponding to Figure 3d.

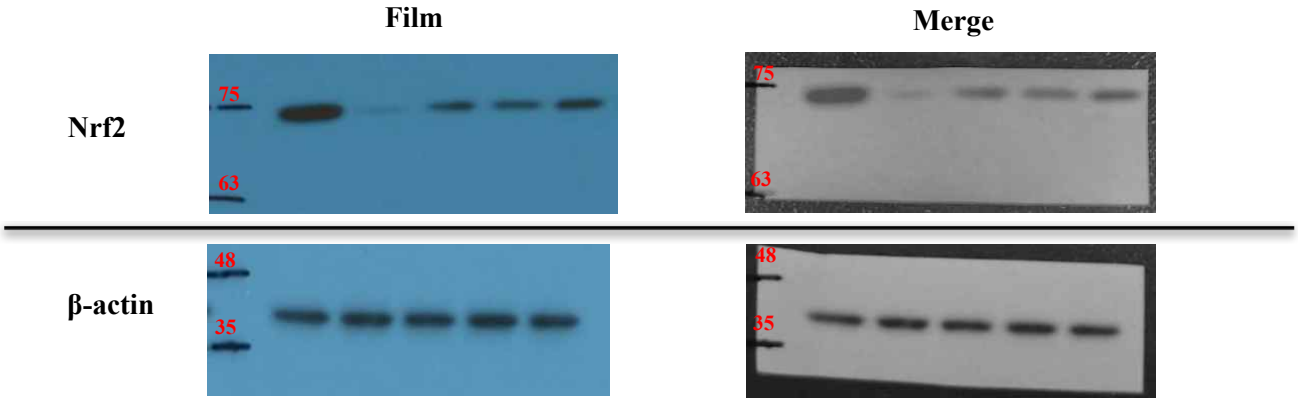

Film represents the original chemiluminescent Western blot image, whereas Merge represents an overlay of the chemiluminescent image and the corresponding membrane image. The lanes are presented in the same order as those in the corresponding figures in the main manuscript.

Original Western blot images

Supplementary Figure S2. Original Western blot images corresponding to Figure 4i.

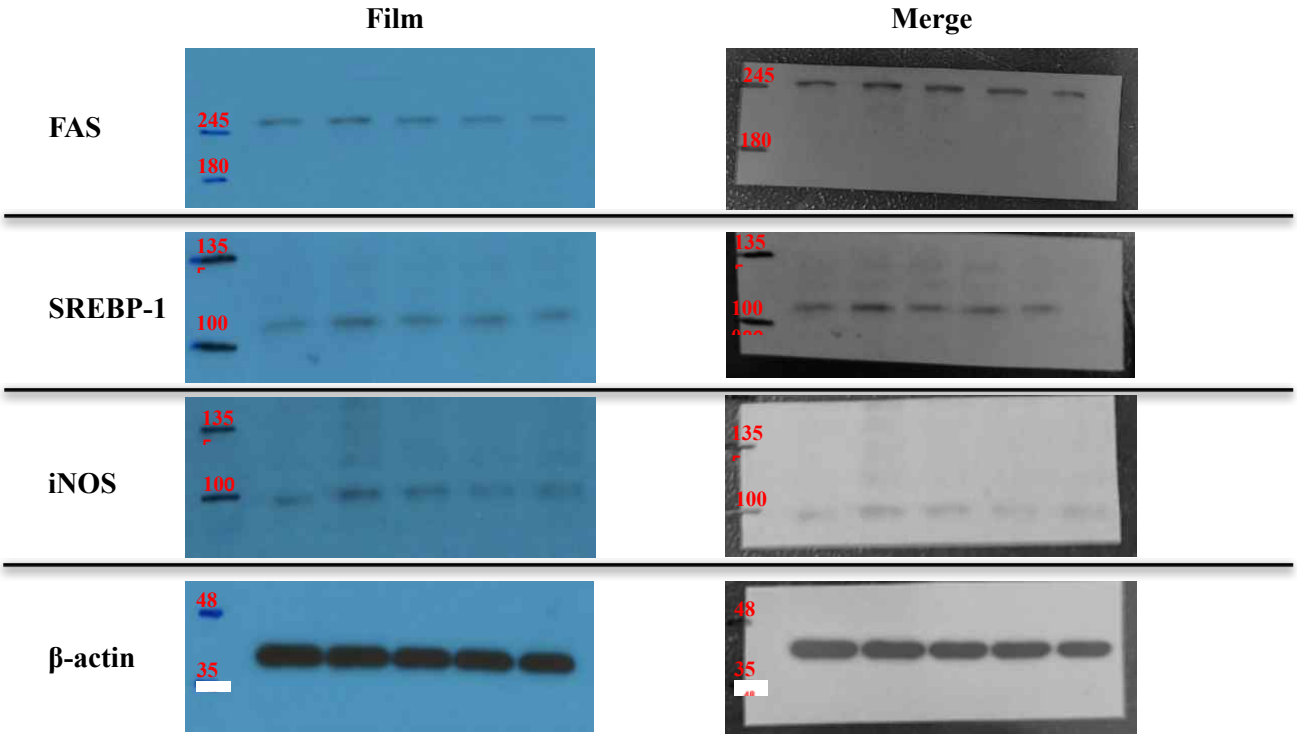

Film represents the original chemiluminescent Western blot image, whereas Merge represents an overlay of the chemiluminescent image and the corresponding membrane image. The lanes are presented in the same order as those in the corresponding figures in the main manuscript.

Original Western blot images

Supplementary Figure S3. Original Western blot images corresponding to Figure 4j.

Film represents the original chemiluminescent Western blot image, whereas Merge represents an overlay of the chemiluminescent image and the corresponding membrane image. The lanes are presented in the same order as those in the corresponding figures in the main manuscript.

Original Western blot images

Supplementary Figure S4. Original Western blot images corresponding to Figure 5j.

Film represents the original chemiluminescent Western blot image, whereas Merge represents an overlay of the chemiluminescent image and the corresponding membrane image. The lanes are presented in the same order as those in the corresponding figures in the main manuscript.
