Article title: Continuation of TTFields after recurrence in patients with glioblastoma may be associated with prolonged post-recurrence survival

Authors: Shinya Tokunaga, Noritaka Sano, Takeshi Miyata, Etsuko Hattori-Yamamoto, Hiroyuki Ikeda, Shigeki Takada, Masahiro Tanji, Yohei Mineharu, Yoshiki Arakawa

Corresponding author: Noritaka Sano, Department of Neurosurgery, Kyoto University Graduate School of Medicine, Kyoto, Japan. E-mail: n_sano@kuhp.kyoto-u.ac.jp

Online Resource 1 Kaplan–Meier curves of progression-free survival (PFS) from initial surgery. **a** PFS in the entire cohort (n = 35). **b** PFS by tumor-treating fields (TTFields) continuation status after first recurrence. Median PFS was 15.0 months in the continuation group and 10.5 months in the discontinuation group (p = 0.427, log-rank test). Time is shown in months; tick marks indicate censored observations
