

Supplementary Data

Figure S1. PRCPi sensitizes tumors to endoxifen. MCF7 tumors and ER+ PDX tumors were treated with vehicle, Endoxifen, PRCPi, or combination for the indicated times. Average tumor volumes in each group were plotted with SE indicated. There are significant differences between vehicle and endoxifen or PRCPi ($p < 0.05$) in both tumors. There are significant differences between single drug and combination therapies ($p < 0.05$) in both tumors. E and F. Average mouse body weights in each group are presented with SD indicated. There are no differences between groups ($p > 0.05$).
