Supplementary Fig. 1. Extracted ion chromatograms (m/z 151.0400) of KAR1 standard and different plant species. Samples were analysed by LC-QTof with positive electrospray ionisation. Species are listed on the top left of each chromatogram. M/z values ranging from 145 to 155 at 3.45 min (black dot) are displayed on the right side of their respective chromatogram.
