

A

B

The original exposure gel of WB is provided as above. We guarantee that there is no other sample information in areas other than the edges of the image. Our cropping does not mask sample information and there is no overexposure. We have used clear delineation with dividing lines and white space to make the grouping of gels in Fig. 2D explicit.

Figure title and legend

Original western gels of Fig.2D A. GAPDH expression in HUVEC cells either with treatment of PBS (left) or SPP1 (right); B. PSMA expression in HUVEC cells either with treatment of PBS (left) or SPP1 (right).
