Fig. 1 Occupancy data for the invasive flatworm *Kontikia andersoni* on Macquarie Island plotted per 1km² grid, a) in 2004 by Greenslade et al. (2007), and b) this work, which included a combination of 24 island-wide invertebrate monitoring sites (2015-2018) and a dedicated flatworm survey in 2018. Darker red indicates a higher rate of detection.
