

Supplementary Figure S2. Effect of NB compounds on p-FOXM1 and FOXM1 protein. Western blot analysis of p-FOXM1 and FOXM1 expression when CAOV3 and OVCAR4 cells were treated with NB compounds for 1 hour. Protein quantification is provided below each protein band, and protein expression has been normalized to the corresponding control treatment. Full image, original blots can be found in **Supplementary Figure S10**. Ponceau S stain shows protein loading. Protein levels were quantified using Fiji software.
