

Supplementary Figure 1: Each variable quantitated by IHQ was plotted for BCG R and NR patients. (n= 32)

Supplementary Figure 2: Kaplan Meyer curve of recurrence-free survival (RFS) in months. Patients were stratified by GATA-3 (A), T-Bet (B), G/T (C) and Eo counts (D) as low or high, based on the median values of the different variables analyzed (65.5 for age; 21.5 for GATA-3+; 2.9 for T-Bet+; 3.6 for G/T and 5.9 for EPX+). p values are indicated (log rank test, R).
