

SUPPLEMENTARY DATA

Supplementary Figure 1: Schematic diagram depicting selection criteria in the observational study with FinnDiane cohort.

Supplementary Figure 2: Dose response (1, 5 and 10 μ M) experiment for determination of effects of amlodipine on VEGF secretion in MIO-M1 cells at different concentrations and time points. Values for VEGF concentrations are calculated as average of 3 wells for every treatment from a single experiment.

Supplementary Figure 3: Survival of MIO-M1 cells at end of drug treatment (96 hours). Survival mean percentages are calculated from two independent experiments.*p value = 0.01.
