

Table 2: Outcomes of patients with involutional entropion undergoing surgical correction involving triangular tarsectomy and limited orbicularis myectomy with lower eyelid retractor plication (group A) versus everting sutures alone (group B) (N = 58).

Parameter	n (%)		
	Group A (n = 30)	Group B (n = 28)	Total (N = 58)
Postoperative complications*			
Short-term pain (up to 5 days)	25 (83.3)	5 (16.7)	30 (50)
Ecchymosis	12 (40.0)	2 (6.7)	14 (23.3)
Scarring	1 (3.3)	0 (0.0)	1 (1.7)
Punctal ectropion	2 (6.7)	0 (0.0)	2 (3.3)
Recurrence*			
At 3 months	0 (0.0)	1 (3.3)	1 (1.7)
At 6 months	0 (0.0)	2 (6.7)	2 (3.3)
At 12 months	0 (0.0)	4 (13.3)	4 (6.7)
Success rate*	30 (100.0)**	26 (86.7)**	56 (93.3)

**Percentages for this variable were calculated out of a total of 60 affected eyelids, including 30 in group A and 30 in group B. **Differences between the two groups for this variable were statistically significant according to a Chi-squared test ($p < 0.05$).*
