

Table 1: Eligibility Criteria for Study Inclusion

	Criteria
Population	Reviews of studies were limited to adult persons with dementia, across all stages of dementia (e.g. mild - severe), and at any setting.
Intervention	The review of studies of the Life Story Book: All forms of the Life Story Book (e.g. tangible book, multimedia, memory album) were included. For the purpose of this study, the Life Story Book was defined by any process that involves working with a person and/or their family to collect and record the information and/or stories about the person's past and present life to be used to benefit in their care (McKeown et al., 2006), that is often supported with photographs, text or memorabilia, relevant to the person's life (Grøndahl et al., 2017).
Comparator	This review did not intend to compare the Life Story Book to/with any other forms or types of intervention.
Outcome	In order to include the study in this review, the study outcomes should have reported the advantage of using the Life Story Book among person with dementia, and/or present the guidelines in using the Life Story Book, and/or discuss the impact of using the Life Story Book for the caregiver/relatives.
Study Type	Any review paper was included (systematic review, scoping review or narrative review).
