

Table 2. Binary logistic regression analysis of risk stratification.

Variables	Parameter Estimates			
	B	P	Exp(B)	95% Confidence Interval for Exp(B)
Faecalibacterium	-0.543	0.04	0.581	0.345 — 0.976

Variables	Parameter Estimates			
	B	P	Exp(B)	95% Confidence Interval for Exp(B)
Roseburia	-0.13	0.93	0.987	0.737 — 1.322

Variables	Parameter Estimates			
	B	P	Exp(B)	95% Confidence Interval for Exp(B)
OTUs	-0.14	0.058	0.986	0.972 — 1.00

The reference category is: Unfavorable; B: regression coefficient; Exp(B): The exponent of B

The risk classification standard is listed in supplementary Table 2
