

Randomized  
sample size (42 patients)

Split-mouth  
& single blind  
design

Sites & techniques were Randomized for the first surgery  
then the versus site, with the other method, was implemented

Modified IANB  
technique (n=42)

Conventional IANB  
technique (n=42)

Every patient had surgery on the other site, with  
the differing technique, with two weeks apart.
