a)a

Additional Fig. 1. a) goeBURST snapshots of *Acinetobacter baumannii* genomes available from all Asian countries. b) goeBURST snapshot of all *A. nosocomialis* genomes available from around the world.

Additional Fig. 2. Cluster dendrogram of 70 ACB isolates based on accessory gene profile. Isolation source of strains, indicated by colors, show interspersing of strains from different anatomical sites. The dendrogram was generated using the PVclust package of R. The bootstrap probability (BP) value is denoted in green and the approximately unbiased (AU) p -value is denoted in red.

Additional Fig. 3. Specific Biofilm Formation (SBF) values of 15 *Acinetobacter* strains. The error bars represent standard error.
