

Additional file 1: Full AMoCo study design

The AMoCo¹ study included 4 components including:

- Among patients presenting for Post-Abortion Care:
 - 1) A quantitative cross-sectional observational study including
 - A prospective medical record review of all women presenting for abortion complications with a medical record.
 - A quantitative survey of these women who stayed at least overnight and survived
 - 2) A qualitative survey among the most severe patients (near-miss)
- In the health facility:
 - 1) A rapid facility assessment of its capability to provide comprehensive abortion care
 - 2) A Knowledge Attitudes Behavior and Practice survey about abortion care among health professionals involved in comprehensive abortion care
