Table S4. Clinical characteristics of patients who underwent splenectomy due to HBV-related liver cirrhosis-induced hypersplenism.

Group	HBV-infected patients
Number	11
Gender (male/female)	9/2
Age (years) *	46.5 (31-57)
ALT (IU/L) *	27 (14-229)
HBV DNA (log ₁₀ IU/L) *	2 (2-6.3)
HBeAg/anti-HBe	2/2

*Data are shown as median (range); ALT, alanine aminotransferase; anti-HBe, antibody to hepatitis B e antigen; NA, not available. Fig. 1A, 1B, and 1C, available data from 9 HBV-infected patients; Fig. 1D and 1E, available data from 2 HBV-infected patients.
