

s1

Suppl Fig s1 EGFR expression in patient tissue microarray. IHC staining of human tissue microarray demonstrating EGFR staining on the membrane and in the cytoplasm. The positive controls are 1:placenta and 2:kidney and negative control is 3:tonsil.

Patient ID	Membrane H-Score	Cytoplasmic H-Score
1	294	200
2	300	160
3	60	100
4	0	140
5	60	35
6	270	220
7	180	180
8	10	110
9	240	110
10	195	285
11	60	55
12	6	200
13	300	275

Suppl. Table s1 Individual H-score of EGFR staining on the membrane and in the cytoplasm of the tissue microarray.

Supplementary Figure s2: H&E of mice brain in CAR T vs mock group. All mouse brains collected per methods section. Each brain was sectioned in its entirety and H and E stained. No evidence of tumor in any mice in CAR T group. All mice had tumor presence and brain infiltration.
