

Title: The expression of individual genes by cluster.

Supplemental Figure 2. Expression of key marker genes by cell. Each plot is a UMAP projection of all cells with each cell colored based on expression of a given gene. Color scales are present to the right of each plot and differ based on the range of expression of the given gene.

Each cell is colored on a spectrum based on the minimum and maximum cell expression of that gene to best visualize each gene's range of expression.
