

Title: Cell type integration by challenge state or genetic line for all samples.

Supplemental Figure 1. The integration of cells by cluster across samples for MDV challenge or genetic line. A correction was performed within the principal components space to iteratively remove batch effects. A. All cells associated with individual clusters were parsed by MDV challenge or control assignment and colorized accordingly. B. All cells associated with individual clusters were parsed by the resistant or susceptible line status and colorized accordingly.
