

Supplementary Fig. 1. UMAP plot representing the proteomic profiles in non-pregnant patients by disease severity. Black = control, blue = mild case, yellow = moderate case, red = severe case, brown = critical case.

Supplementary Fig. 2. UMAP plot representing the proteomic profiles of non-pregnant patients according to sex. Black = control, red = case. Circle = female, triangle = male.

Supplementary Fig. 3. Bar plot displaying the relative importance of the top 50 proteomic predictors for distinguishing moderate COVID-19 cases from controls.

Supplementary Fig. 4. Bar plot displaying the relative importance of the top 50 proteomic predictors for distinguishing asymptomatic/mild COVID-19 cases from controls.
