

Supplementary Figure 2

Supplementary Figure 2. *Srf* KO iPSCs and CAF-1 KD cells share overlapping gene-expression patterns.

- (A)** Venn diagram showing the comparison between differentially expressed genes in *Srf* KO iPSCs and p150-depleted ES.
- (B)** Venn diagram showing the comparison between differentially expressed genes in *Srf* KO iPSCs and p60-depleted ES.
- Genes with an FDR-adjusted p value ≤ 0.05 and a $\log_2$ fold change of at least 1 were considered to be differentially expressed.
