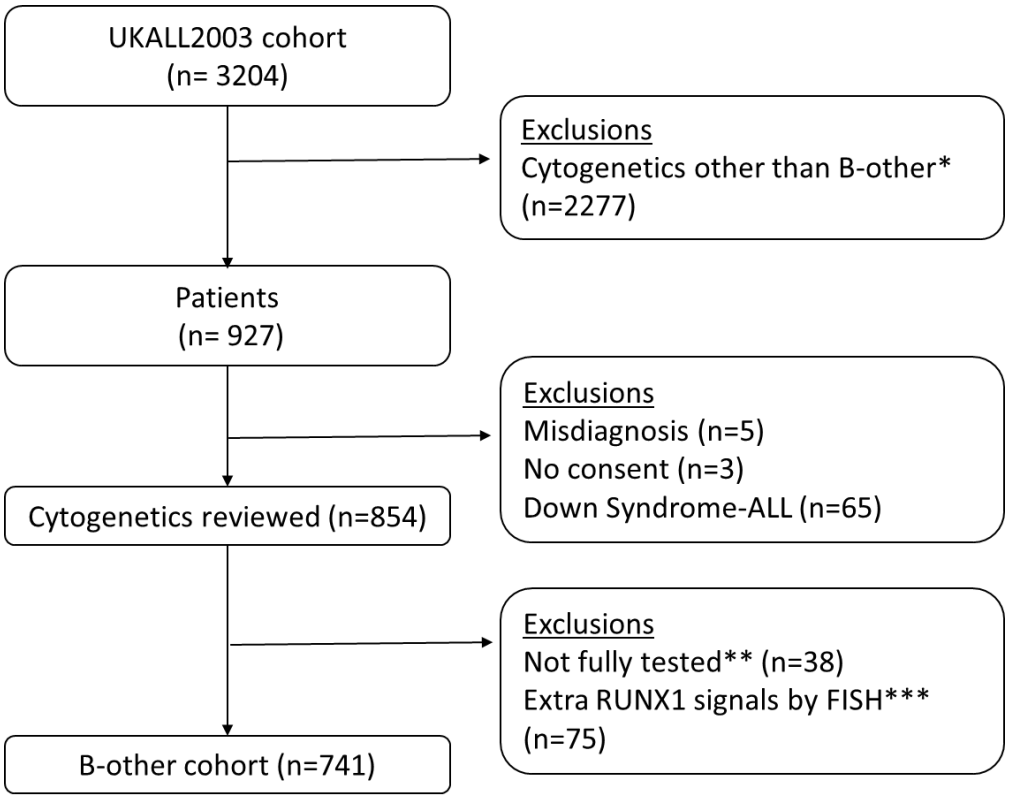
Supplementary Tables 1-12	Pages 13-28

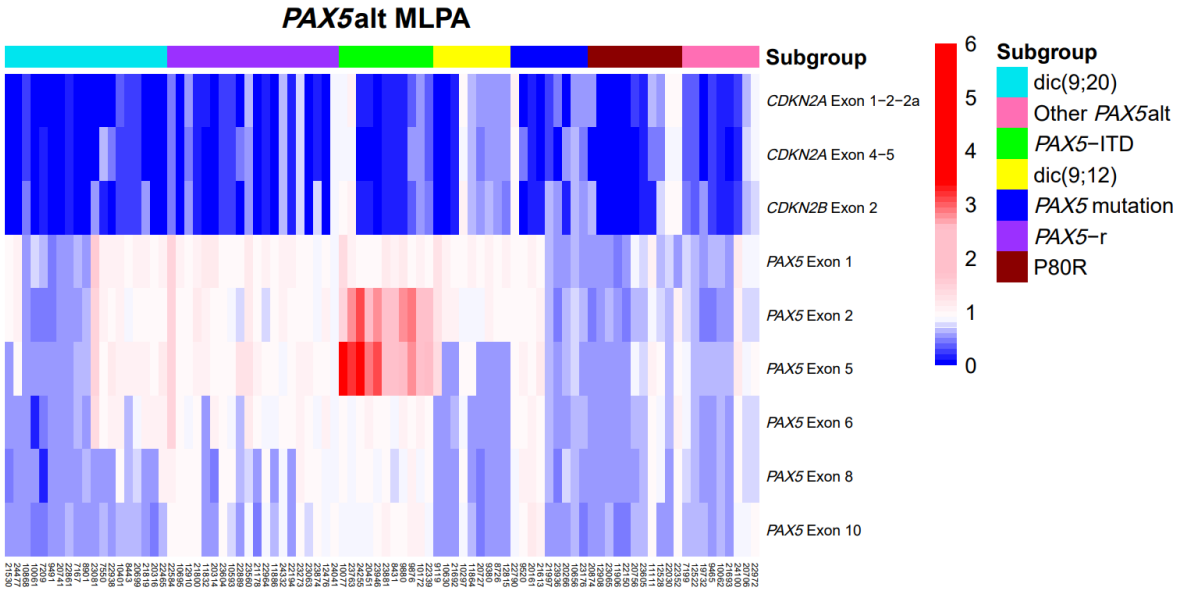
Supplementary Figure 1 – UKALL2003 cohort selection

CONSORT diagram showing how patients registered on UKALL2003 were selected for this study. *Patients with T-ALL and patients testing positive for *ETV6*::*RUNX1*, *BCR*::*ABL1*, *TCF3*::*HLF*, *TCF3*::*PBX1*, high hyperdiploidy, near haploidy, low hypodiploidy, *KMT2A* rearrangements, or intrachromosomal amplification of chromosome 21 (iAMP21-ALL). **Patients with failed cytogenetics and no FISH or RT-PCR for *KMT2A*, *BCR*::*ABL1* and *ETV6*::*RUNX1*. ***Patients with failed cytogenetics and additional signals for *RUNX1* by FISH. Four or more copies could be indicative of high hyperdiploidy or iAMP21-ALL.



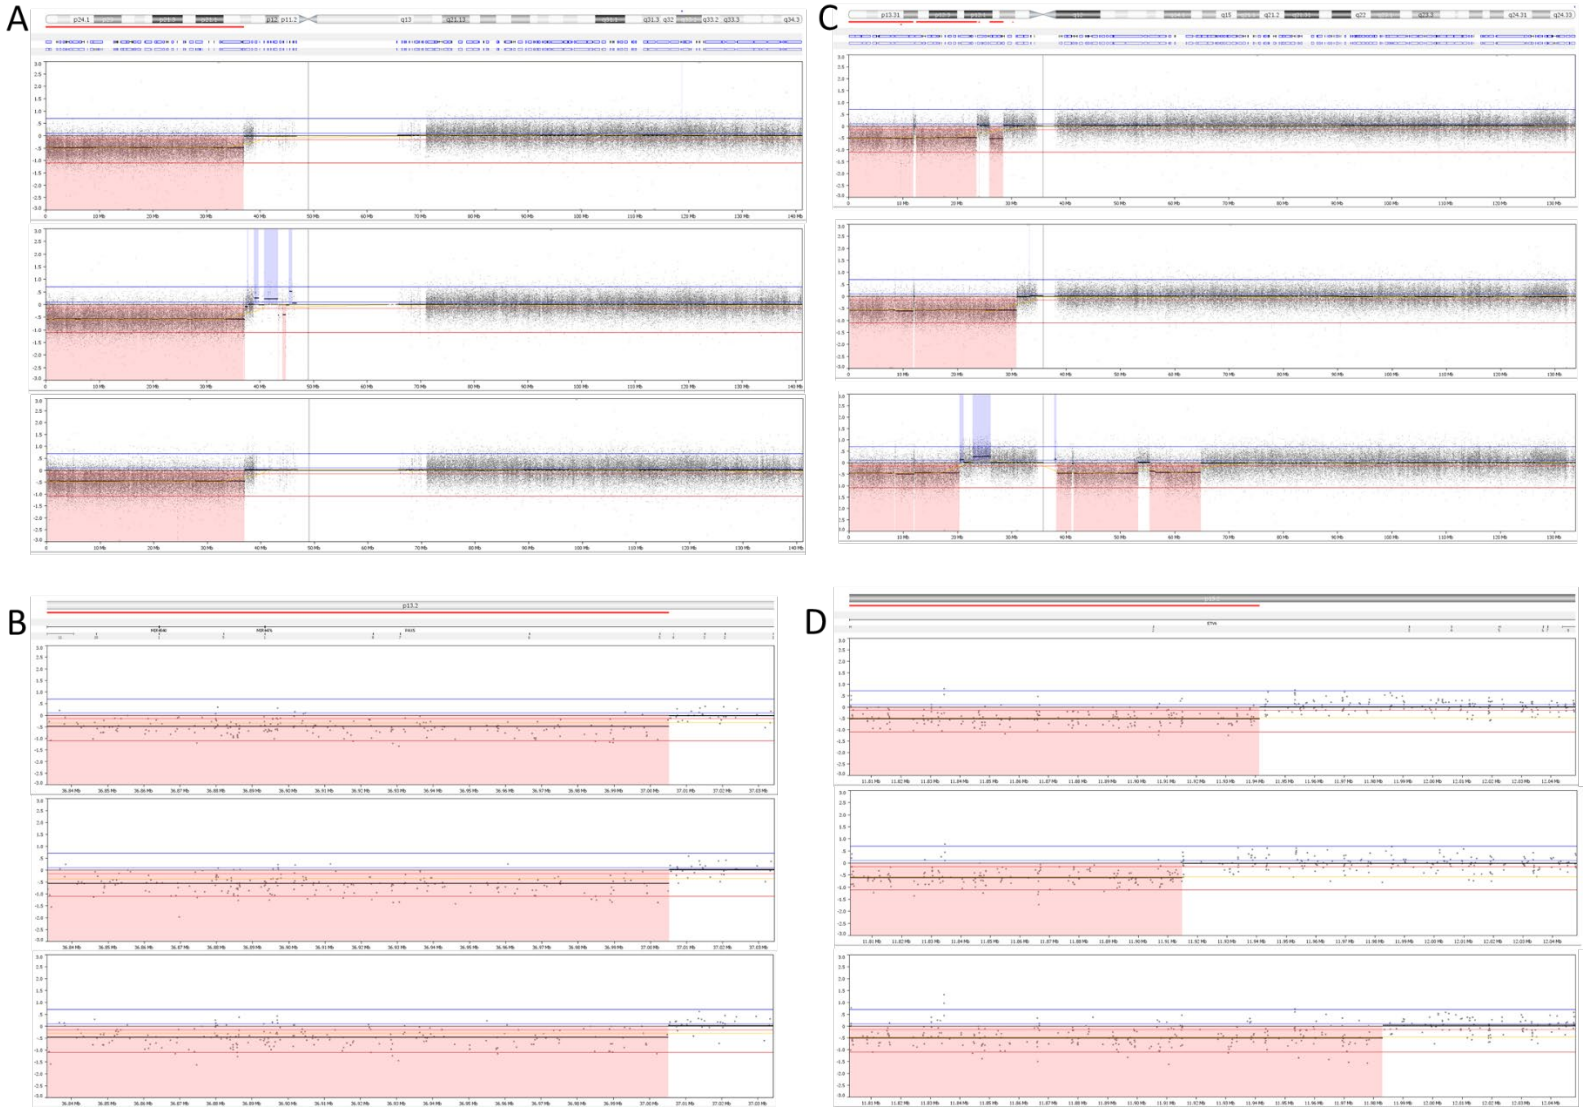
Supplementary Figure 2 – Subtype-defining copy number alterations in *PAX5*alt

Heatmap of Multiplex Ligation-dependent Probe Amplification (MLPA) ratios for copy number detection of *CDKN2A*, *CDKN2B* and *PAX5* across the *PAX5*alt subtypes. *PAX5-r* – *PAX5* rearranged; *PAX5*-ITD – *PAX5* internal tandem duplication.



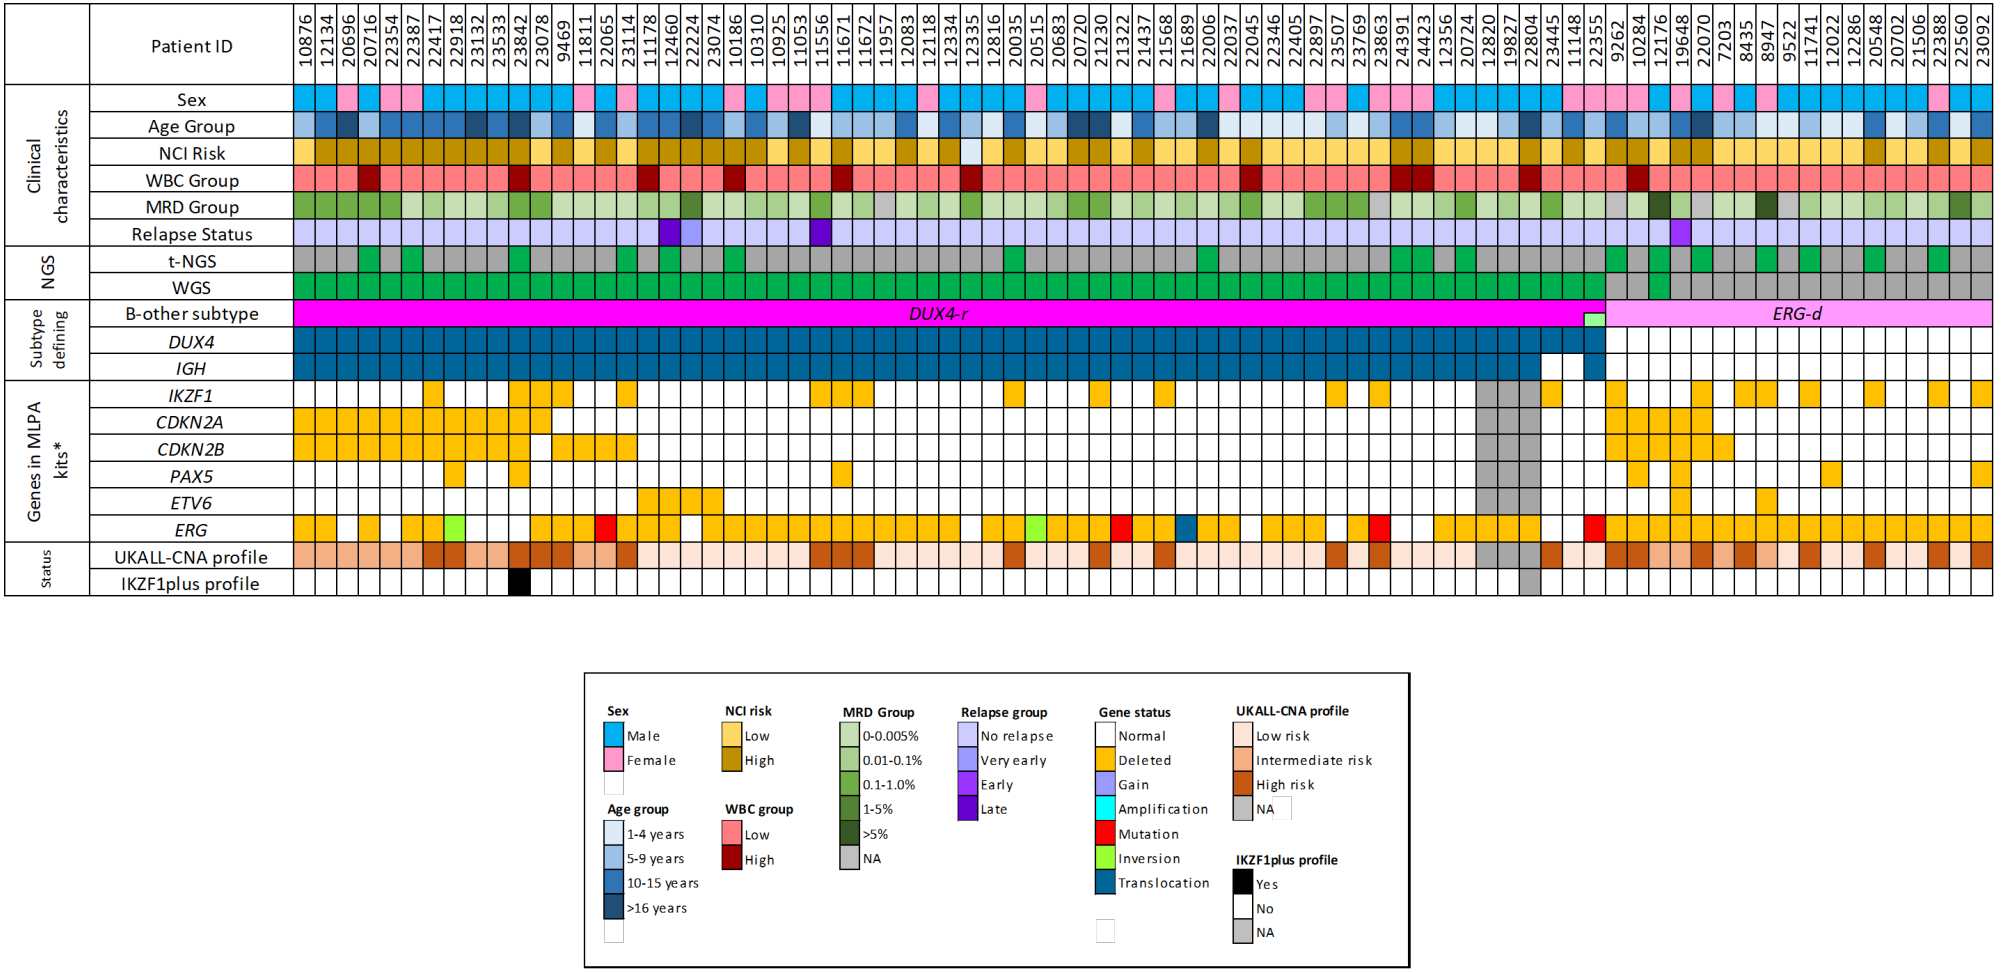
Supplementary Figure 3 – Copy number profile of dic(9;12)(p13;p13) by SNP array

SNP6.0 copy number profiles for 3 patients with dic(9;12)(p13;p13) showing a distinctive copy number pattern in which there is loss of 9p (A) with common breakpoint within *PAX5* (B) resulting in deletion of the 3' portion of the gene. (C) Deletions of 12p differed between cases and were complex in 2 patients, however 3'*ETV6* is retained in all 3 patients (D). These finding are consistent with the formation of *PAX5::ETV6.*



Supplementary Figure 4 – Genomic and clinical features of *DUX4-r* and *ERG*-d subtypes

Oncoplot showing the distribution of genetic abnormalities within the *DUX4*-r and *ERG*-d subtypes, the distribution of clinical features, and associated copy number profile risk status (UKALL-CNA[1] and IKZF1$_{plus}$[2]). Coexistence of an additional subtype defining abnormality is illustrated in the B-other-ALL subtype row for one patient (22355), illustrated in light green. This patient had an *IGH*::*CEBPD* rearrangement warranting joint classification into the *ZEB2*/CEPB subtype. Copy number profile status was unavailable for patients lacking Multiplex Ligation-dependent Probe Amplification (MLPA) data. *The SALSA P335-ALL-IKZF1 and P327-iAMP21-ERG MLPA kits were used to determine gene copy number. Relapses were defined as follows: very early, <18 months from diagnosis; early, within 6 months of end of treatment; late >6 months after end of treatment. NCI – National Cancer Institute; WBC – White blood cell count; MRD – Minimal residual disease; t-NGS – targeted next-generation sequencing; WGS – whole genome sequencing; CNA – copy number alteration.



Supplementary Figure 5 – Genomic and clinical features of ABL-class and JAK-STAT dysregulated subtypes

A) Oncoplot showing the distribution of genetic abnormalities within the *CRLF2*-r, ABL-class and *JAK2*-r subtypes, the distribution of clinical features and associated copy number profile risk status (UKALL-CNA[1] and IKZF1$_{plus}$[2]). Coexistence of additional subtype defining abnormalities is illustrated in the B-other-ALL subtype row; teal – *PAX5*alt, green – *ETV6*::*RUNX1*-like, blue – *ZNF384*-r. Copy number profile status was unavailable for patients lacking Multiplex Ligation-dependent Probe Amplification (MLPA) data. *The SALSA P335-ALL-IKZF1 and P327-iAMP21-ERG MLPA kits were used to determine gene copy number. Relapses were defined as follows: very early, <18 months from diagnosis; early, within 6 months of end of treatment; late >6 months after end of treatment

B) Circos plot illustrating the pattern of ABL-class translocation partner genes. A three-way translocation between *ETV6*, *ZMIZ1* and *ABL1* is shown in green. NCI – National Cancer Institute; WBC – White blood cell count; MRD – Minimal residual disease; t-NGS – targeted next-generation sequencing; WGS – whole genome sequencing; CNA – copy number alteration.

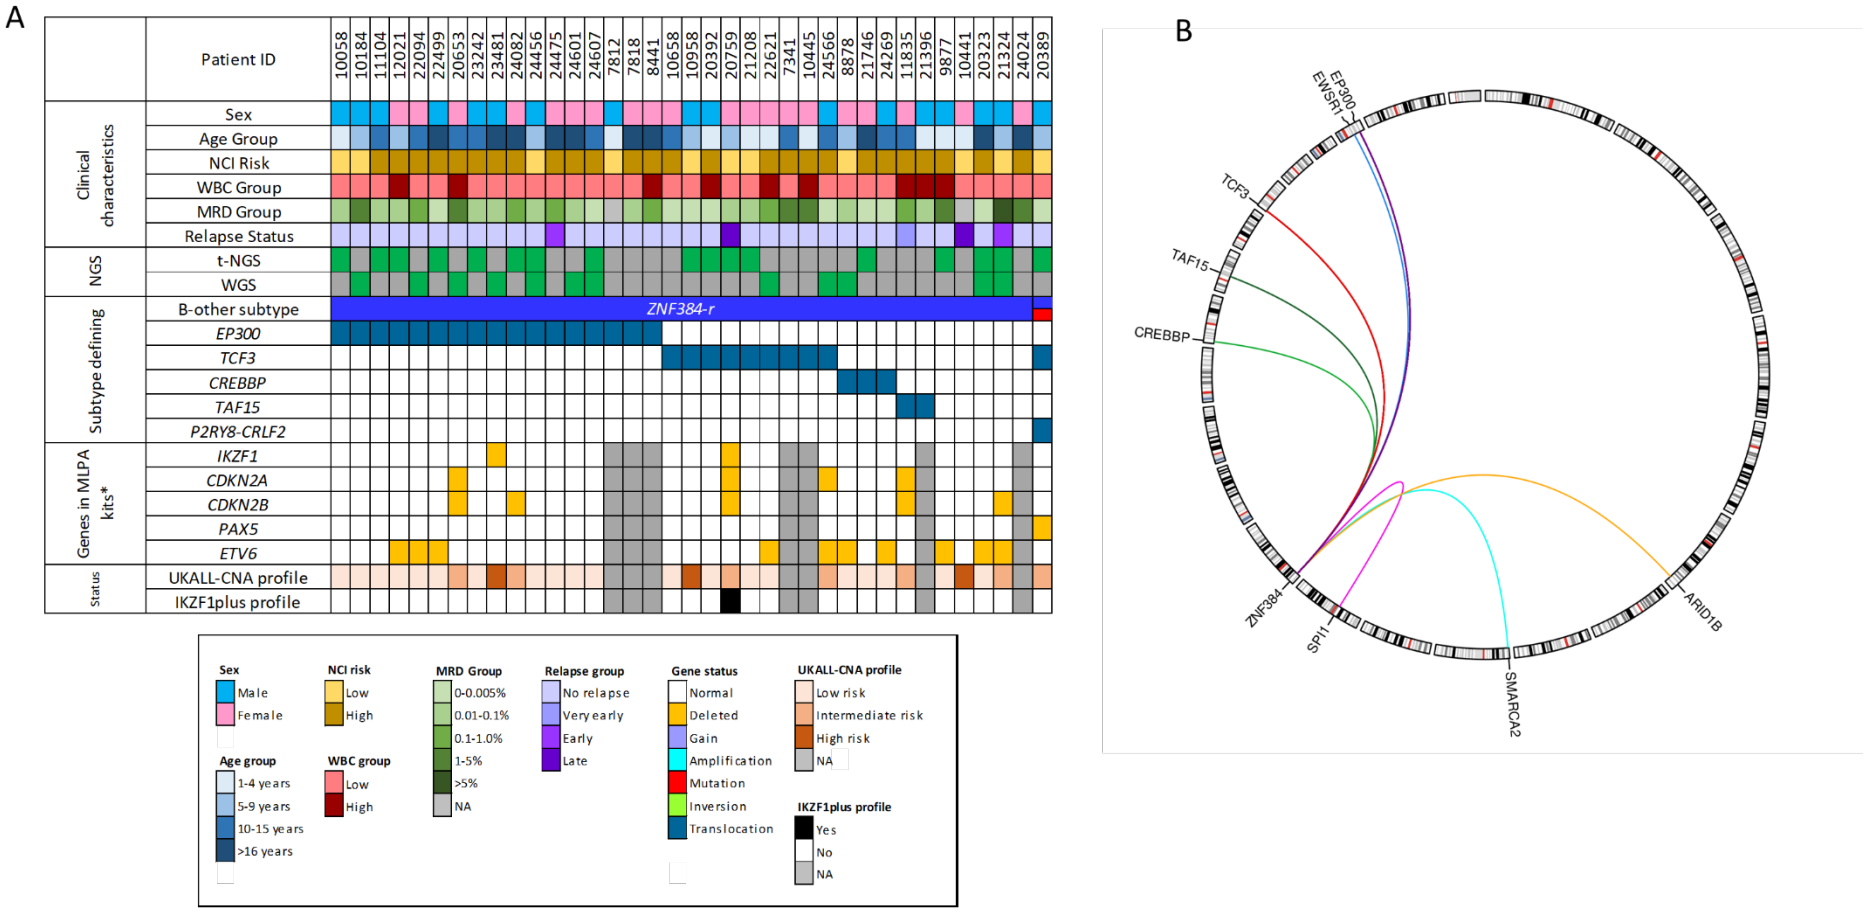
Supplementary Figure 6 – Genomic and clinical features of *ZNF384*-r subtype

A) Oncoplot showing the distribution of genetic abnormalities within the *ZNF384*-r subtype, the distribution of clinical features, and associated copy number profile risk status (UKALL-CNA[1] and IKZF1$_{plus}$[2]). Coexistence of *CRLF2*-r is indicated in red in the B-other-ALL subtype row. Copy number profile status was unavailable for patients lacking Multiplex Ligation-dependent Probe Amplification (MLPA) data. *The SALSA P335-ALL-IKZF1 and P327-iAMP21-ERG MLPA kits were used to determine gene copy number. Relapses were defined as follows: very early, <18 months from diagnosis; early, within 6 months of end of treatment; late >6 months after end of treatment B) Circos plot illustrating the pattern of *ZNF384* translocation partner genes. NCI – National Cancer Institute; WBC – White blood cell count; MRD – Minimal residual disease; t-NGS – targeted next-generation sequencing; WGS – whole genome sequencing; CNA – copy number alteration.



Supplementary Figure 7- Outcome of patients treated on UKALL2003 belonging to the *DUX4*-r subtype.

(A) Relapse rate and (B) event free and overall survival of *DUX4*-r patients in relation to patients with canonical good risk genetics, *ETV6::RUNX1* and high hyperdiploidy (HeH); (C) Distribution of end of induction MRD levels by genetic subtype; (D) Characteristics of patients belonging to the *DUX4*-r subtype who have relapsed.

Supplementary Figure 8 – Genomic and clinical features of remaining B-other-ALL subtypes

Oncoplot showing the distribution of genetic abnormalities, clinical features, and associated copy number profile risk status (UKALL-CNA[1] and IKZF1$_{plus}$[2]) for the remaining B-other-ALL subtypes, including: *ZEB2*/CEBP, *IGH*::*ID4*, *MEF2D-r*, *NUTM1-r*, *IKZF1* N159Y, *BCL*/*MYC* and *IGH*::*IL3*. Coexistence of an additional subtype defining abnormality is illustrated in the B-other-ALL subtype row for one patient (22355), illustrated in pink. This patient had an *IGH*::*DUX4* rearrangement, warranting joint classification into the *DUX4*-r subtype. Copy number profile status was unavailable for patients lacking Multiplex Ligation-dependent Probe Amplification (MLPA) data. *The SALSA P335-ALL-IKZF1 and P327-iAMP21-ERG MLPA kits were used to determine gene copy number. Notes: (1) There were an insufficent number of PAX5-alt and CRLF2-r cases with a UKALL-CNA GR profile to assess the effect this profile. There were too few events in the DUX4-r and ETV6-RUNX1-like groups to assess the impact of any deletion or profile; (2) Deletions and profiles were determined by MLPA analysis but were not available for all cases within each genomic subgroup; (3) p values are from an univariate Cox regression model using dichotomous variables.

Abbreviations; NCI, National Cancer Institute; MRD, minimal residual disease; CNA, copy number alteration; GR, good risk; IR,
