Supplementary table 4. Hazard associated with tumor grade in a country-stratified multivariable Cox regression model, offset with a score combining tumor size, number of affected nodes, and diagnosis age as implemented in the ER-positive PREDICT score. The model was fitted to data from CIMBA BRCA2 carriers with ER-positive breast cancer.

(m=50)	HR	95% confidence interval	P
Grade1 vs grade2	0.89	0.41-1.92	0.83
Grade3 vs grade2	0.68	0.48-0.96	0.072
Diagnosis year	0.98	0.94-1.03	0.50
