

Supplementary Table 1. Association between gestational age (weeks) and CNVs

CNV types	Gestational age in weeks (SD)	POR (95% CI)	<i>P</i> value
Normal CNV (n=4,050)	22.3 (5.7)	1	< 0.001
CNVs (n=958)	20.27 (5.9)	0.94 (0.93-0.95)	

Abbreviations: CNV, copy number variations; 95% CI, 95% confidence interval; POR, prevalence odds ratio; SD, standard deviation; VUS, variants of uncertain significance. *P* value was calculated from bivariate logistic regression analysis.
