

Figure S1. (A)(B)(C) Mass spectrometry was performed to screen out the differential proteins and enriched for KOBAS.

Figure S2. (A)(B) Absorbance detected at 450 nm after 0, 24 and 48 h 5 μM CAPE and 10 μM CAPE treating using cell counting kit8 assay in MKN-NC cell line and MKN-OE cell line.

Figure S3. (A) WTAP had no significant difference in cycle change. (B) WTAP had no effect on the stability of P65 mRNA.
