

Supplemental figure 1

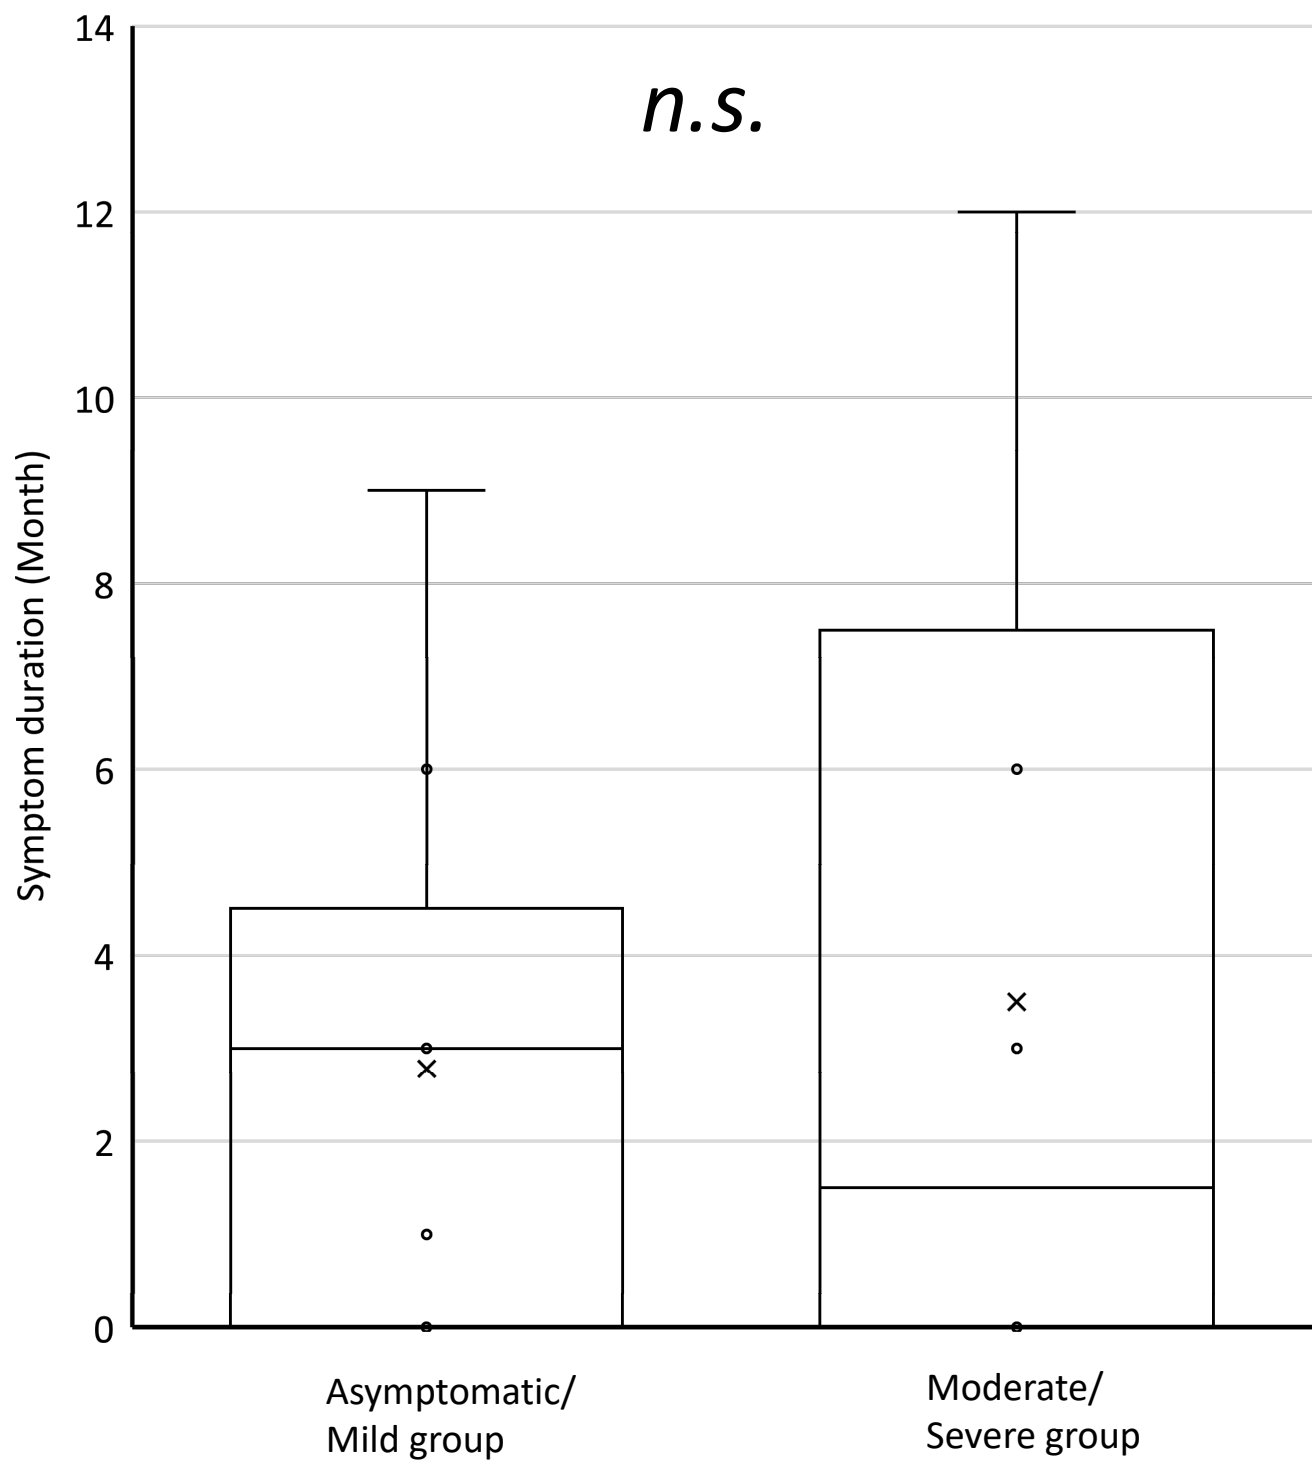

Figure Legend:

Supplemental figure 1

- Comparison of the sum of CTCAE score (left) and duration of at least one symptom (right) and between two groups.

Symptom duration was compared between Asymptomatic/Mild group and Moderate/Severe group. The duration of the most prolonged symptoms from each participant was compared. There were no statistically significant differences.

Supplemental figure 2

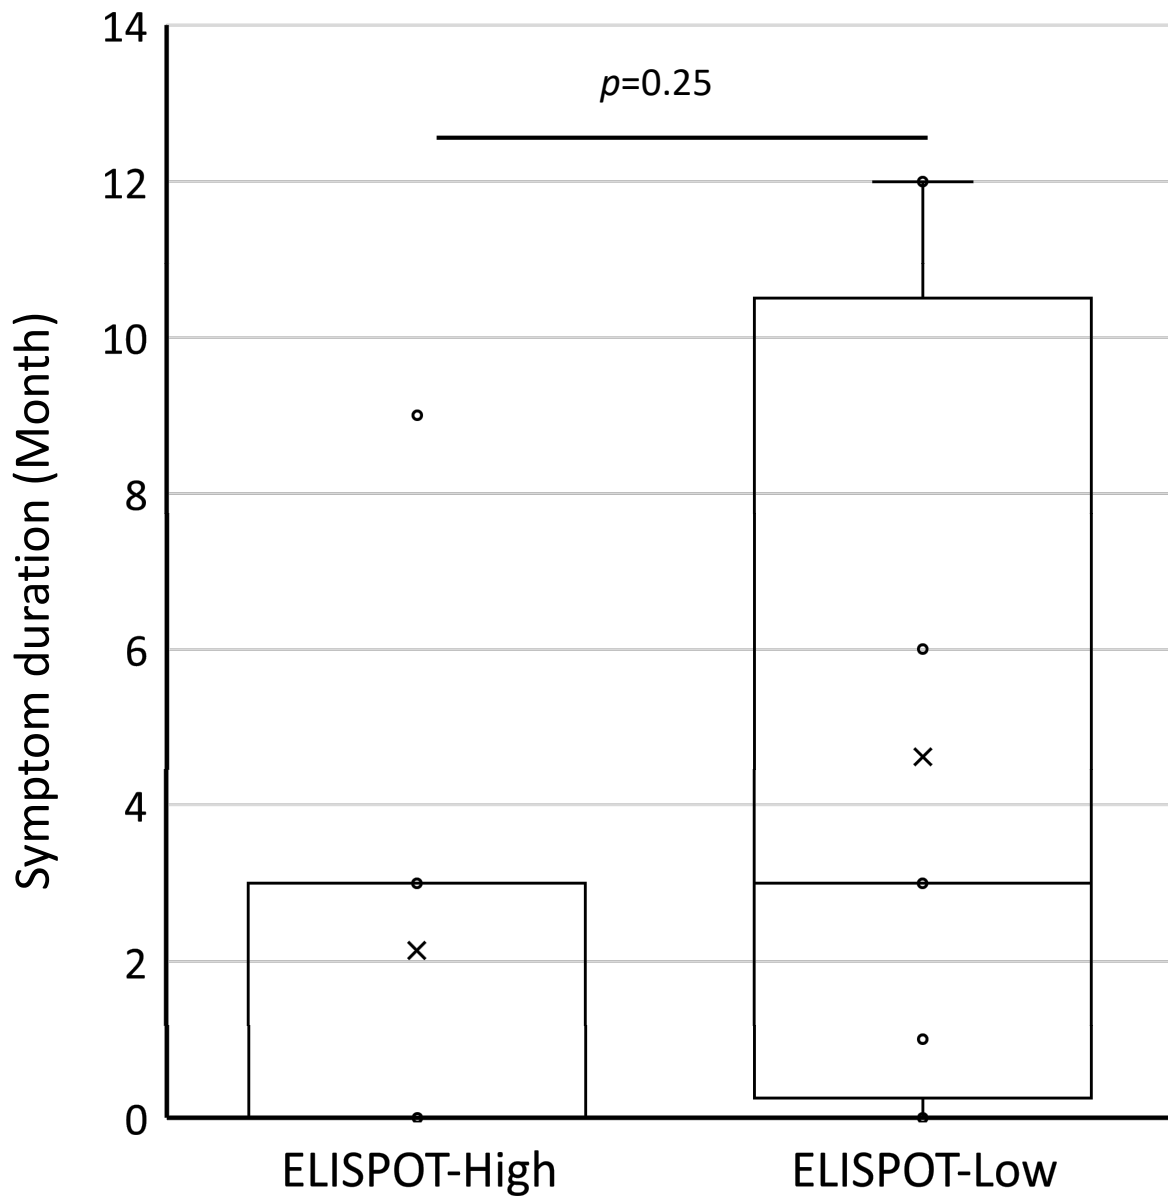

Figure Legend: Supplemental figure 2

Symptom duration was compared between ELISPOT-high group and low group. The duration of the most prolonged symptoms from each participant was compared. Although there were no statistically significant differences, ELISPOT-low group showed a tendency for symptoms to persist for a longer period.
