

Supplementary Figure 4. Relationship between the six-gene LAPS and immunotherapy-related biomarkers in TCGA-LUSC patients. No correlation or statistical significance between the risk score (A) TIDE score, (B) *CD274* score, and (C) T-cell exclusion score. The risk score from this six-gene LAPS found no relationship with the expression levels of the three immune checkpoints (D) *PDCD1*, (E) *CD274*, and (F) *CTLA4*.
