

S2. Argos locations and ingestion records of one individual in 2017 during 8 days of monitoring at Kerguelen Archipelago, near the site of Pointe Suzanne (49°26'S, 70°26'E).

Black dots represent Argos locations, with 65% of standard-quality (and 45% with estimated error radius <250 m). Red lines indicate that an ingestion has been recorded between two Argos positions (based on datetime data).
