

Supplementary figure 1 : Immunofluorescence images of tumoroids and their counterpart tissue. Immunofluorescence images of mice tumoroids and their matching tissue derived from xenografts of 786-O or ACHN cells. Each column represents a different co-labeling : (1) FAP & Vimentin, (2) CAIX & Ki67, (3) CD31 & E-cadherin, (4) Pan collagen & CD44, (5) CD68 & Actin. Images were obtained using the LSM 880 AiryScan confocal microscope (Zeiss). Scale bar = 50μm.
