

Figure 8A

Gels and blots which are shown cropped in Figure 8A. Note: The blot was cut into multiple strips following the protein transfer. The edges of the PVDF membrane are visible. Here, bands containing the following regions were separately imaged: p-p38(30-100 kDa), p38(30-130 kDa), p-JNK(30-50 kDa), JNK(30-55 kDa), p-ERK(30-70 kDa), ERK(30-70 kDa) and GAPDH (30-50 kDa).
