

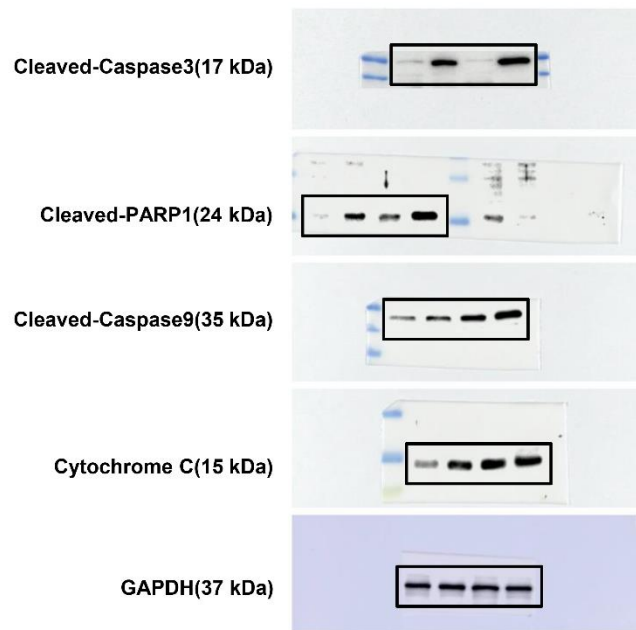

Figure 4A

Gels and blots which are shown cropped in Figure 4A. Note: The blot was cut into multiple strips following the protein transfer. The edges of the PVDF membrane are visible. Here, bands containing the following regions were separately imaged: Cleaved-Caspase3 (10-25 kDa), Cleaved-PARP1(15-35 kDa), Cleaved-Caspase9 (30-45 kDa), Cytochrome C(10-25 kDa) and GAPDH(30-45 kDa).
